

Table S1. List of genes identified by the SST method

Gene	Number of clones
Receptor	
Lymphatic vessel endothelial hyaluronan receptor 1 (Lyve1)	20
Scavenger receptor class F member 1 (Scarf1)	6
Endothelin receptor type B	6
Fetal liver kinase 1 (Flk1)	5
Poliovirus receptor-related 2	5
Cd44	3
Poliovirus receptor	3
Neuropilin	3
Endothelial protein C receptor	2
Secretin receptor	2
Cd97	2
Brother of CDO	2
Heparin-binding fibroblast growth factor receptor 2	1
Frizzled receptor 4	1
Gp130	1
Scavenger receptor class B member 1 (Scarb1)	1
Frizzled receptor 2	1
FMS-like tyrosine kinase 1 (Flt1)	1
Interferon α/β receptor	1
IL10 receptor 2	1
Adhesion molecule	
Junctional adhesion molecule	8
Endothelial cell-selective adhesion molecule	6
Intercellular adhesion molecule 1	4
Claudin 4	4
Integrin $\beta 3$	2
EpCAM	2
Milk fat globule-EFG factor 8 protein	1
Claudin 3	1
Carcinoembryonic antigen-related cell adhesion molecule 1	1
Integrin $\beta 2$	1
Immunoglobulin superfamily, member 4	1
Extracellular matrix protein	
Syndecan	5
Syndecan 2	4
Ligand	
Delta-like homolog (dlk)/preadipocyte factor 1	3
P-selectin glycoprotein ligand precursor	3
Ephrin B1	1
Mucin	
Endomucin 1	2
Cd164	2
Mucin 1	1
Others	
Cd47	4
Kangai 1	4
Hepatocyte growth factor activator inhibitor type 2	3
Aminopeptidase A	2
Transmembrane 9 superfamily member 1	2
CMRF35-like molecule	2
TROP2	1
Aminopeptidase N	1
Stromal cell derived factor receptor α	1
FXYD domain-containing ion transport regulator 5	1
Prostaglandin transporter subtype 2	1
Liver-specific zona pellucida domain containing protein	1
Uroplakin IIIb	1
Cysteine-rich motor neuron 1	1
Neural proliferation, differentiation and control gene 1	1
