

Table S1. Mean fluorescence intensity (MFI) of d3.25 sorted populations

Population	T-EGFP MFI day 3	Activin	T-EGFP MFI day 4
d3.25 T ⁺ F ^{neg}	5579	+	3329
		-	2088
d3.25 T ⁺ F ^{pos}	4086	+	1023
		-	949

Flk1^{pos} and Flk1^{neg} cells from a d3.25 sort were reagggregated in either the absence or presence of activin A (3 ng/ml). The next day they were analyzed for the expression of T-EGFP by flow cytometry.
