			(0.77)		(0.57)		(0.68)		(0.79)		(0.30)		(0.35)		(1.83)		(0.34)	

Denticles were recorded as pointing anteriorly (up) or posteriorly (down). The numbers between parentheses are the Yates' adjusted  $\chi^2$  values obtained after comparing in a contingency test the orientation of denticles in each row with the wild type. The critical values for significance levels of 0.05 and 0.001 are 3.841 and 10.828, respectively (Rohlf and Sokal, 1995). Values indicating a high significant departure from the wild-type orientation are labelled with an asterisk.

N.A., not applicable.
