Heat-shock and UPR pathways						
wild type	8	0	40	93 [§]	43 [§]	80
<i>ire-1(zc14)</i>	8	0	40	98 [§]	45 [§]	40
<i>hsf-1(sy441)</i>	13	0	40	100 [§]	53 [§]	40

*All strains contained the *ver-1* promoter::gfp transgene (*ns1522*).

Animals were scored as adults at the indicated temperature except for:

[†]Dauer-constitutive *daf-7* animals as dauer larvae at 25°C.

[‡]Dauer-constitutive *daf-2* animals as dauer-recovered adults at 25°C.

[§]Owing to increased lethality at high temperatures, *ire-1(zc14)* and *hsf-1(sy441)* animals were cultivated first at 15°C before shifting as L4 larvae to 25°C, and GFP intensity was scored 24 hours later. Wild-type control animals were shifted under the same conditions.

AMsh, amphid sheath; PHsh, phasmid sheath.
