## Supplementary Material

A

TVGR/Dex Induction of Wnt Signaling

B

Figure S1: TVGR activates canonical Wnt signaling. (A) Quantification of secondary axis induction by ventral vegetal injection of TVGR at the 4 -cell stage with representative tadpoles from each class. (B) RT-PCR on 5 whole embryos or 25 animal caps treated with the indicated reagents. -RT: reaction done in the absence of Reverse Transcriptase, epi. ker: epidermal keratin (epidermis), mus. act.: muscle actin (mesoderm) (C) Animal caps treated with the indicated reagents.

Figure S2: Intron 1 of sall4 binds $\boldsymbol{\beta}$-catenin but does not mediate a Wnt signal. (A) Using animal caps to screen for direct transcriptional targets of Wnt in neural tissue. (B) qPCR on 15-25 animal caps treated as indicated on the X -axis. The Y-axis shows expression relative to odc. meis3 and hoxb9 serve as controls for known direct and indirect targets of Wnt, respectively. (C) Quantification of dorsalization in uninjected embryos (open bars) and embryos injected animally with 500 pg FLAGtagged $\beta$-catenin RNA ( $250 \mathrm{pg} /$ blastomere) at the 2-cell stage (filled bars) as scored by the dorsoanterior index (DAI). Error bars: 1 SEM. Images show a representative uninjected (UC) embryo with a DAI of 7 (normal) and a representative embryo with a DAI of 6 (kinked axis). (D) Schematic of the genomic locus of sall4 in Xenopus laevis (Xenbase.org). Blue boxes indicate exons and yellow circles indicate the location of putative TCF/LEF binding sites. Black ovals show the locations of the zinc-finger domains. Numbers indicate the position of putative binding sites relative to the transcription start site (TSS). (E) Chromatin immunoprecipitation of FLAG-tagged $\beta$-catenin in late gastrulae/early neurulae. Open bars represent uninjected embryos and closed bars represent embryos injected with 500 pg FLAGtagged $\beta$-catenin ( $250 \mathrm{pg} /$ blastomere at the 2-cell stage). Error bars: 1 SEM per cent input for each measurement. (F) Luciferase reporter assays in HEK293 cells treated with or without BIO and/or mouse FGF. Error bars: 1 SEM. All means were compared by one-way ANOVA followed by Tukey post-hoc analyses (*: p<0.05).

Figure S3: $c d x 2$ is activated by canonical Wnt signaling and not affected by Sall4 knockdown (A) qPCR on 5 whole embryos or 15 to 25 animal caps treated according to the conditions indicated on the X-axis. The Yaxis shows expression relative to odc. Error bars: 1 SEM. (B-C) $c d x 2$ expression at stage 18 . Dorsal views with the anterior oriented towards the top. (B) Uninjected control embryo. (C) Embryo injected with 20 ng Sall4 MO in one animal-dorsal cell at the 4-cell stage.

Figure S4: sall1 is activated by canonical Wnt signaling and expressed during early embryogenesis. (A) qPCR on 5 whole embryos or 15 to 25 animal caps treated according to the conditions indicated on the X-axis. The Y-axis shows expression relative to odc. Error bars: 1 SEM. (B-E) Whole-mount in situ hybridizations of sall1 in Xenopus laevis embryos. (B) Whole mount stage 10 embryo stained for sall1, dorso-vegetal view with the dorsal lip of the blastopore oriented towards the top. (B') Sagittal section of stage 10.5 embryo stained for salll expression, animal pole is to the top and dorsal is to the right. (C-D) Dorsal views of indicated neurula stage embryos, anterior is oriented towards the top. (C'-C") Transverse sections of stage 12 embryos stained for sall1, (C') anterior and (C'") posterior. (D'-D") Transverse sections of stage 15 embryos stained for sall1, (D') anterior and ( $\mathrm{D}^{\prime \prime}$ ) posterior. ( $\mathbf{E}^{\prime}-\mathbf{E}^{\prime \prime}$ ) Transverse sections of stage 18 embryos stained for sall1, ( $\mathrm{E}^{\prime}$ ) anterior and ( $\mathrm{E}^{\prime \prime}$ ) posterior. ( $\left.\mathrm{B}^{\prime}, \mathrm{C}^{\prime}-\mathrm{E}^{\prime \prime}\right) 50 \mu \mathrm{M}$ sections, (C'-E") dorsal oriented towards the top. No: notochord, S: somite, PSM: presomitic mesoderm.

Figure S5: Injected embryos express functional FLAG-tagged $\boldsymbol{\beta}$-catenin. (A) Western blot for the FLAG epitope in injected embryos. Actin serves as the loading control. (B) Ventralization of embryos injected with $\beta$ catenin MO and co-injection with FLAG-tagged $\beta$-catenin RNA. F- $\beta$ cat: FLAG-tagged $\beta$-catenin.

Figure S6: Sequence of sall4 intron 1 in Xenopus laevis. Sequence from X. laevis genome (xenbase.org) coordinates: Scaffold1115:232,200..237,499. Putative TCF/LEF binding sites are indicated in red. Priming sites used for ChIP-qPCR are highlighted in yellow. Underlined sequences show TCF/LEF sites tested in ChIP.

Figure S7: Sall4 does not rescue Dkk1-induced anteriorization. (A-D) Anterior views of whole-mount in situ hybridazations for otx2 and krox20 on Xenopus laevis embryos. (A) Uninjected control (UC). (B) Embryo injected with 400pg $d k k l$ RNA. (C) Embryo injected with 400pg $d k k l$ and 500pg sall4 RNA. (D) Embryo injected with 500 pg sall4 RNA.

Table S1: List of all primers used. RT-PCR: Conventional RT-PCR. qPCR: quantitative PCR. WMISH: Used to make a probe for whole mount in situ hybridization. ChIP: Used for qPCR on immunoprecipitated chromatin.

Table S2: Genes with >2-fold expression (direct Wnt activation vs. anterior neural) found by RNA-Seq. The data represents cold increase as measured by fragments per kilobase of exon per million reads (FPKM). The nature of this quantification can lead to high fold changes in lowly expressed genes and likely accounts for the massive fold increases calculated in genes with the highest differential expression.

## Gene

Cdca A7L transcription factor RAM2
Klf10 ? hypothetical protein MGC98877 ivns1abp influenza virus NS1A binding protein

MGC80567 protein
LCHN? hypothetical protein MGC114999

RABGAP1L hypothetical protein MGC52980

PTN1 pleiotrophin MGC84465 protein arrb1 arrestin, beta 1

Txnrd3 Thioredoxin reductase 2 MGC81848 protein

Foxil or Foxi4.2a fork head protein
LIMS1-b LIM domain hypothetical protein MGC81174

LMO7 LIM domain containing cDNA clone MGC:180040
arrdc3 arrestin containing hypothetical protein MGC131006

CANT1 Calcium activated nucleotidase similar to $\mathrm{Ca} 2+$-dependent endoplasmic reticulum nucleoside diphosphatase

D7 protein
Dact1 dapper 1 Antagonist of beta-catenin FRODO

RASSF7 Ras assiciation domain containing MGC78972 protein

Sox11 XLS13B protein
Myt1 cDNA clone MGC: 196991
zmiz2 MGC86475 protein
ZC3H7B zinc-finger CCCH-containing 7B MGC80522 protein

SAP130 HDAC MGC83894 protein

## Gene

PCNA similar to proliferating cell nuclear antigen

Stx 19 syntaxin 19 hypothetical LOC494752

HMG-box protein HMG2L1
Kif20a hypothetical LOC495414
slc 7 a 3 solute carrier family 7 (cationic amino acid transporter, $\mathrm{y}+$ system), member 3

Lmo7 cDNA clone MGC:180040
Mark2 MAP/microtubule affinityregulating kinase 2

Anp32b MGC80871 protein cyclin A2

PPPDE2 peptidase domain containing MGC84710 protein

CTDP1 FCP1 serine phosphatase ornithine decarboxylase-2

Ube2c hypothetical LOC496302
Efr3a MGC83628 protein
Dlg7 discs large hypothetical protein MGC116559

STXBP3 hypothetical protein MGC115462 syntaxin binding protein 3 (stxbp3)

Acy-3 aspartoacylase-3
PTDSS2 cDNA clone MGC:179871
Tcf-7 transcription factor 7 (T-cell specific, HMG-box)

1sp1 lymphocyte specific protein 1hypothetical protein LOC100158340

NPHP3 nephronophthisis 3 MGC80264 protein

Med 15 Mediator complex subunit 15 ARC105 protein

## Gene

cyclin E3
Fam60a hypothetical protein MGC115222
AHCTF1 AT hook containing transcription factor 1 MGC83673 protein Rhebl1 Ras homolog enriched in brain like 1 hypothetical LOC495056

RNF8a ring finger protein (C3HC4 type) 8

CCNT2 cyclin T2 MGC81210 protein
Tmed2 transmembrane emp24 domain trafficking protein 2 coated vesicle membrane protein, mRNA (cDNA clone MGC:52758 IMAGE:4684109

Mta1 metastatic associated 1 MGC83916 protein

MAPK8/Jnk1 mitogen-activated protein kinase 8

PSMD4 26S proteasome subunit
Poldip3 polymerase delta interaction protein 3 hypothetical protein MGC114944

DNAJC5B HSP cDNA clone MGC: 83536

NCBP2 Nuclear cap binding protein 2
FXDY FXDY domain containing ion transport

Ano5 Anoctamin 5 or Tmem16e
Not Annotated
Ttc30a tetratricopeptide repeat domain 30a

F2rll Coagulation factor 2 receptor like 1
CSDA cols shock protein domain containing A

FUS Fused in Sarcoma?
Exol exonuclease 1
Cfp complement factor properdin

## Gene

mediator complex subunit 16 (med16)
xRMD-2 microtubule-associated protein tyrosine kinase 2 (tyk2)
methyltransferase like 3 (mettl3)
glycine amidinotransferase (Larginine:glycine amidinotransferase) (gatm) syntaxin 5 (stx5)
inhibitor of kappa light polypeptide gene enhancer in B-cells, kinase beta (ikbkb) G-2 and S-phase expressed 1 (gtse1)

RBL1
nucleoporin 93 kDa (nup93)
embryonic ectoderm development (eed) ring finger and CCCH-type domains 1 (rc3h1)
integrin, beta 5
$\operatorname{ataxin} 2(\operatorname{atxn} 2)$
chromosome 19 open reading frame 2 (c19orf2)

PRP4 pre-mRNA processing factor 4 homolog (prpf4)
protein phosphatase methylesterase 1 (ppme1)
orthodenticle homeobox 2 (otx2-a)
chromosome 13 open reading frame 34 (c13orf34)

DAZAP1
FSHD region gene $1(\mathrm{frg} 1)$
serine/threonine kinase 11 interacting protein (stk11ip)
carboxy-terminal kinesin 2
survival of motor neuron 2 , centromeric (smn2)

## Gene

| chromobox homolog 5 (cbx5) |
| :---: |
| CCR4-NOT transcription complex, subunit 6-like (cnot6l-a) |
| uridine-cytidine kinase 2 (uck2) |
| YY1 transcription factor (yyl-b) |
| karyopherin alpha 4 (importin alpha 3) (kpna4) |
| syntaxin 5 (stx5) |
| PRP4 pre-mRNA processing factor 4 homolog B (prpf4b) |
| oxoglutarate (alpha-ketoglutarate) dehydrogenase (lipoamide) (ogdh) |
| acidic (leucine-rich) nuclear phosphoprotein 32 family, member B (anp32b) |
| AT hook containing transcription factor (ahctf1) |
| proline-rich nuclear receptor coactivator (pnrc2-b) |
| YY1 transcription factor |
| Ptk7 |
| H3 histone, family 3B (H3.3B) (h3f3b) |
| bromodomain containing 1 (brd1) |
| mllt6 |
| RAS oncogene family (rab18) |
| RAB6A, member RAS oncogene family (rab6a) |
| transcription factor 3 (E2A immunoglobulin enhancer binding factor E12/E47) (tcf3) |
| cell division cycle 20 homolog (cdc20) |
| sema domain, transmembrane domain (TM), and cytoplasmic domain, (semaphorin) 6D (sema6d) |
| lethal giant larvae homolog 1 (llgl1) |
