

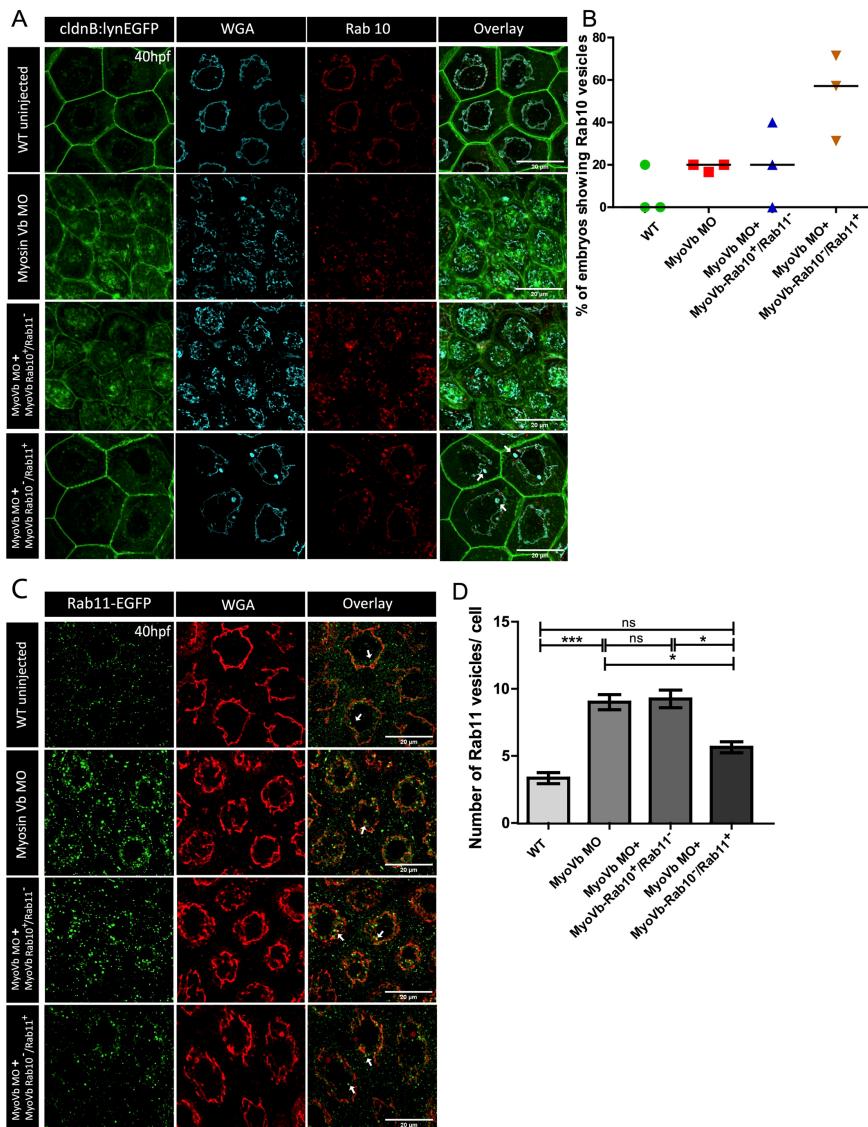

**Fig. S1.** Myosin Vb-Rab11 interaction is essential to prevent the accumulation of apically derived endosomes arising from fluid phase endocytosis

(A) Homology analysis for Human vs Zebrafish Myosin Vb ExonD CDS from 5137/5107 (Human/Zebrafish) to 5247/5217 bases using Clustal omega multiple sequence alignment tool. Mutations introduced to abolish Rab11 binding of Myosin Vb (MyoVb-Rab11<sup>-/-</sup>) are shown in yellow. (B) Representative confocal images of the Lyn-EGFP marked peridermal cells in 48hpf embryos of the given genetic combinations incubated in Rhodamine-Dextran (10 kDa).

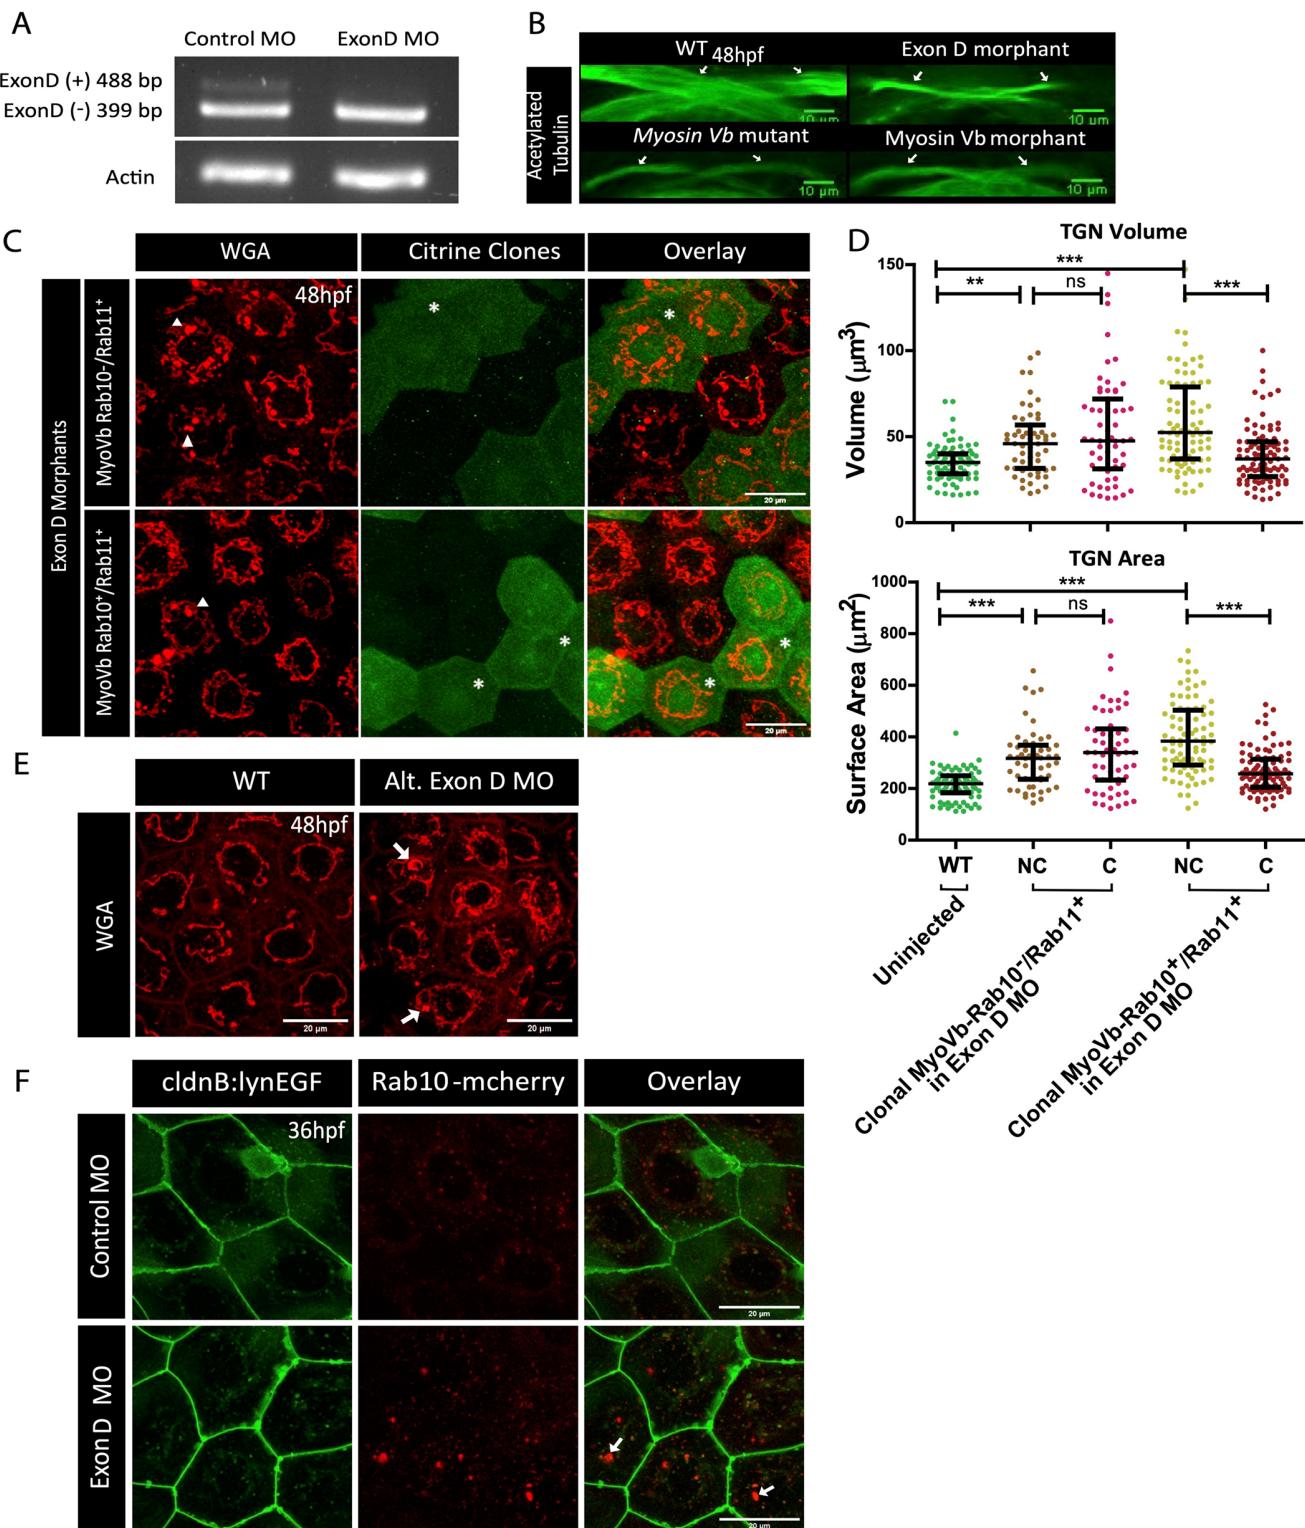

Scale Bars in B = 20μ.

**Fig. S2.** The effect of Myosin Vb isoforms on Rab10 and Rab11 compartments

(A) Confocal images of the peridermal cells of the 40 hpf *Tg(cldnB:lynEGFP)* Myosin Vb morphants rescued with mRNA encoding for MyoVb-Rab10<sup>+</sup>/Rab11<sup>-</sup> or MyoVb-Rab10<sup>-</sup>/Rab11<sup>+</sup> and stained using anti-GFP antibody, WGA and anti-Rab10 antibody. (B) Quantification of percentage embryos showing Rab10 associated TGN phenotype in all the different genetic conditions mentioned. (C) Confocal images of the peridermal cells of the 40hpf *Tg(h2afx:EGFPRab11a)<sup>mw6</sup>* MyoVb morphants rescued with MyoVb-Rab10<sup>+</sup>/Rab11<sup>-</sup> or MyoVb-Rab10<sup>-</sup>/Rab11<sup>+</sup> mRNA and labeled using anti-GFP antibody and WGA. (D) Quantification of the number of Rab11 vesicles in all the different genetic conditions mentioned.

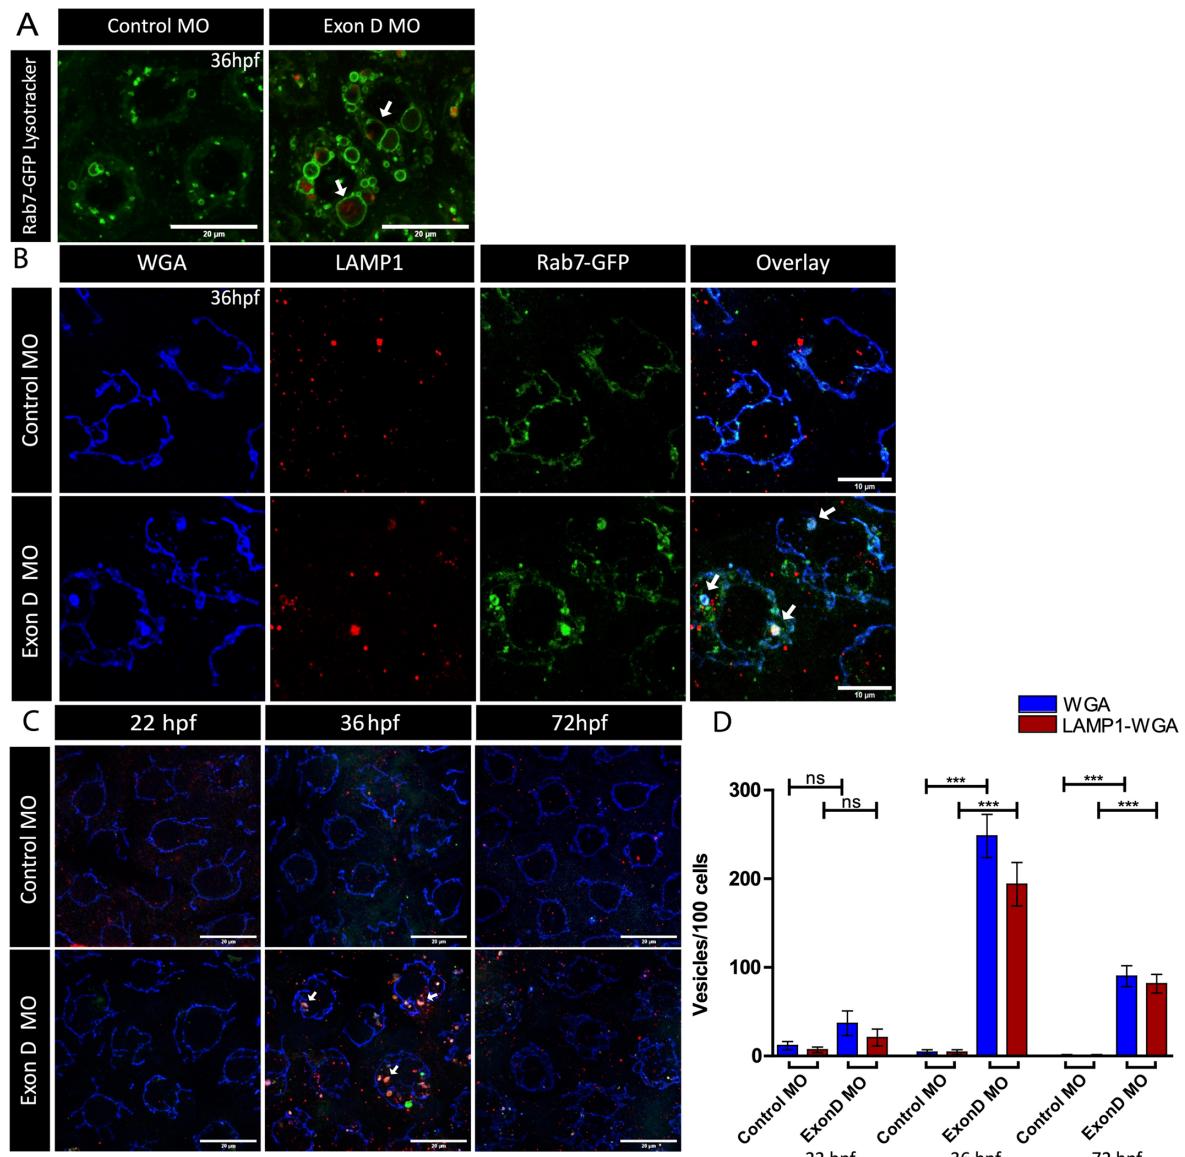

Scale bars in A and C correspond to 20μm. White arrows in A and C point to Rab10 and Rab11 vesicles, respectively. Asterisks in D denote the statistical significance at p<0.05. Key pairwise comparisons are shown in D; for the rest of the comparisons please refer to Table S7.

**Fig. S3.** Validation of Exon D morpholino.

(A) An RT-PCR analysis of control (control MO) and Exon D morphants (Exon D MO) at 48hpf reveals specific loss of 488 bp band representing isoform of Myosin Vb containing Exon D domain, upon morpholino injection, while the 399 bp band corresponding to the isoform without Exon D does not show any reduction. Actin is used as an RT-PCR control. (B) Confocal images of optic nerve of 48hpf wild type, Exon D morphants, *gsp* mutant and Myosin Vb morphants embryos stained using acetylated tubulin antibody. Note that Exon D morphants display thinning of optic nerve, which is also observed in the *gsp* mutants and Myosin Vb morphants. (C) Confocal images of 48 hpf *Tübingen* (*Tü*) embryos showing TGN and post-TGN marked with WGA in Exon D morphants clonally injected with either MyoVb-Rab10<sup>+</sup>/Rab11<sup>+</sup> or MyoVb-Rab10<sup>-</sup>/Rab11<sup>+</sup> mRNA along with Citrine mRNA (tracer) to mark the clones. (D) Quantification of TGN volume and surface area in clonal (=C) and non-clonal cells (=NC) in different genetic conditions mentioned in the figure. (E) WGA staining reveals that the alternative morpholino for Exon D splice site (Alt. Exon D MO) shows the similar branching and vesicle accumulation trans-Golgi phenotype. (F) Live confocal scan of the control and Exon D morphant peridermal cells at 36hpf show large Rab10-mCherry labeled vesicles in the morphants.

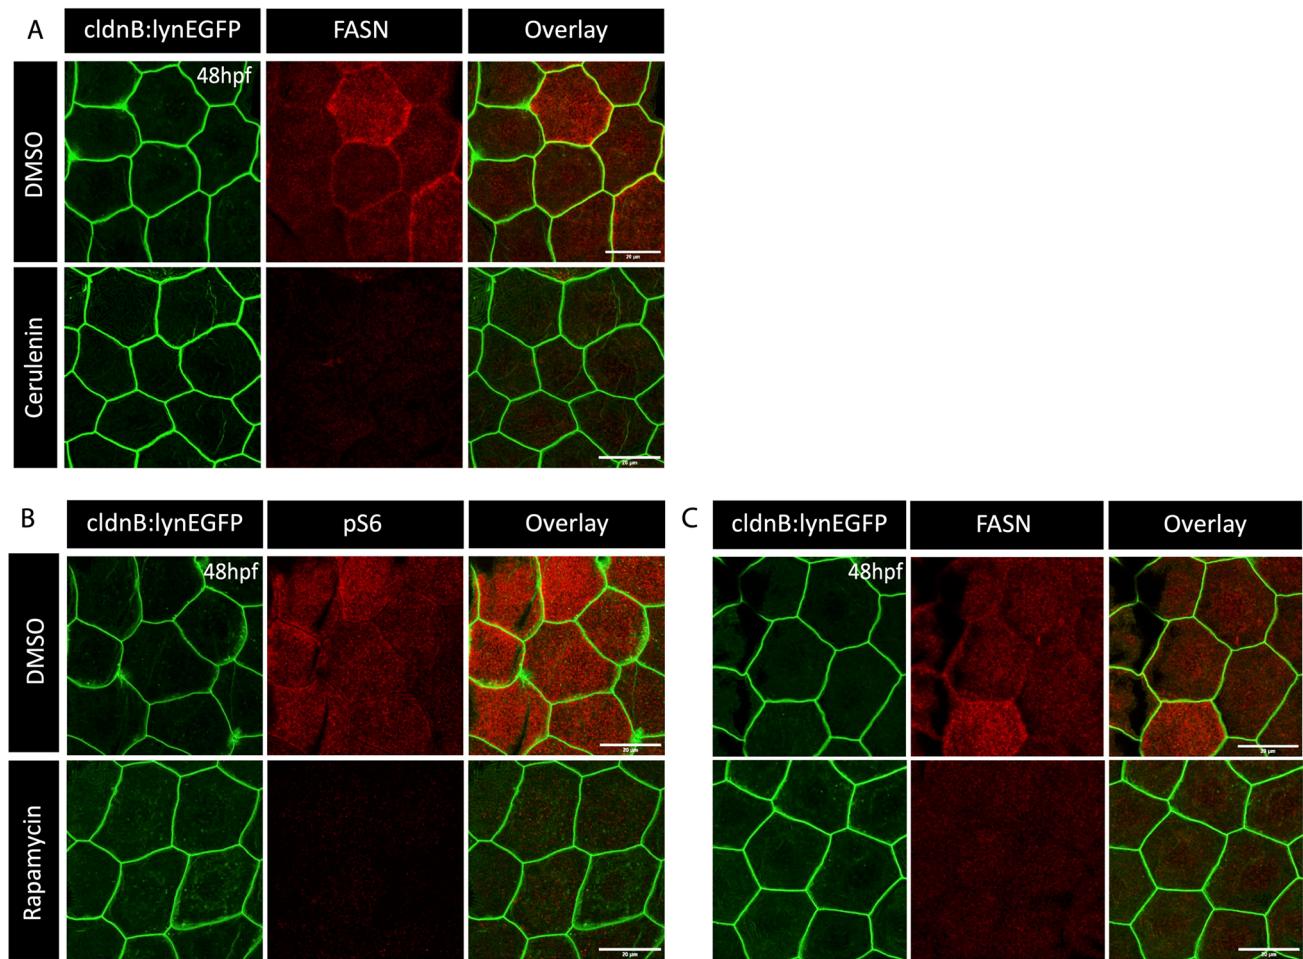

Scale bars in B correspond to 10μm and those in C, E and F to 20μm. White arrows in B indicate the optic nerve and those in E and F point to accumulated vesicles; white arrowheads and asterisks in C point to post-TGN vesicles and clones, respectively. Asterisks in D denote the statistical significance at p<0.05. Only key pairwise comparisons are shown in D; for the rest of the comparisons please refer to Table S8.

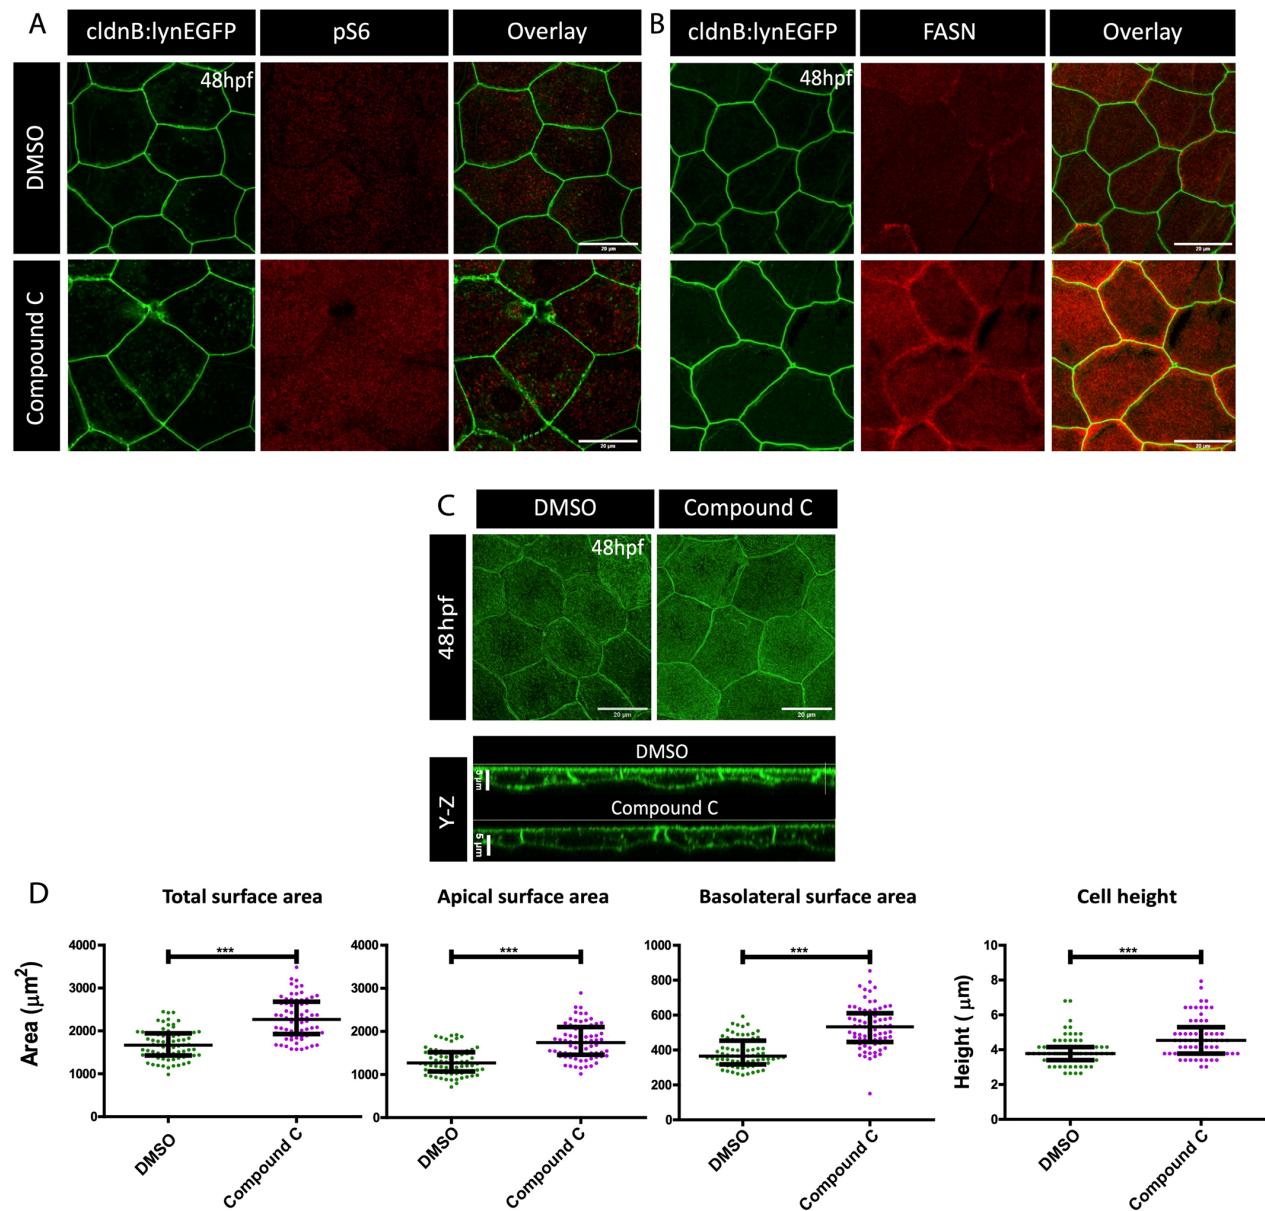

**Fig. S4.** Trans-Golgi vesicles accumulated upon the knockdown of Exon D isoform acquire late-endolysosomal fate in the peridermal cells.

Confocal images of the peridermal cells (A, B, C) of the embryos from *Tg(h2afx: EGFP-Rab7)<sup>mw7</sup>* line injected with Exon D morpholino and (A) labeled with lysotracker dye and imaged live at 36hpf or (B) immunolabeled with WGA and LAMP-1 upon fixation at 36-hpf or (C) during development at 22, 36 and 72hpf. Note the presence of large Rab7 marked vesicles (white arrows in A). Many of the large post trans-Golgi vesicles show co-labeling with Rab7 and LAMP-1 (white arrows in B and C), and their size decreases by 72hpf. (D) Quantification of vesicles (presented in C) stained with WGA and their fraction showing co-localization with LAMP1 at 22, 36 and 72 hpf.

Asterisks in D denote the statistical significance at  $p < 0.05$ . For detailed statistical analysis table please refer to Table S9. Scale bars in A and C corresponds to 20 $\mu$  and those in B to 10 $\mu$ .

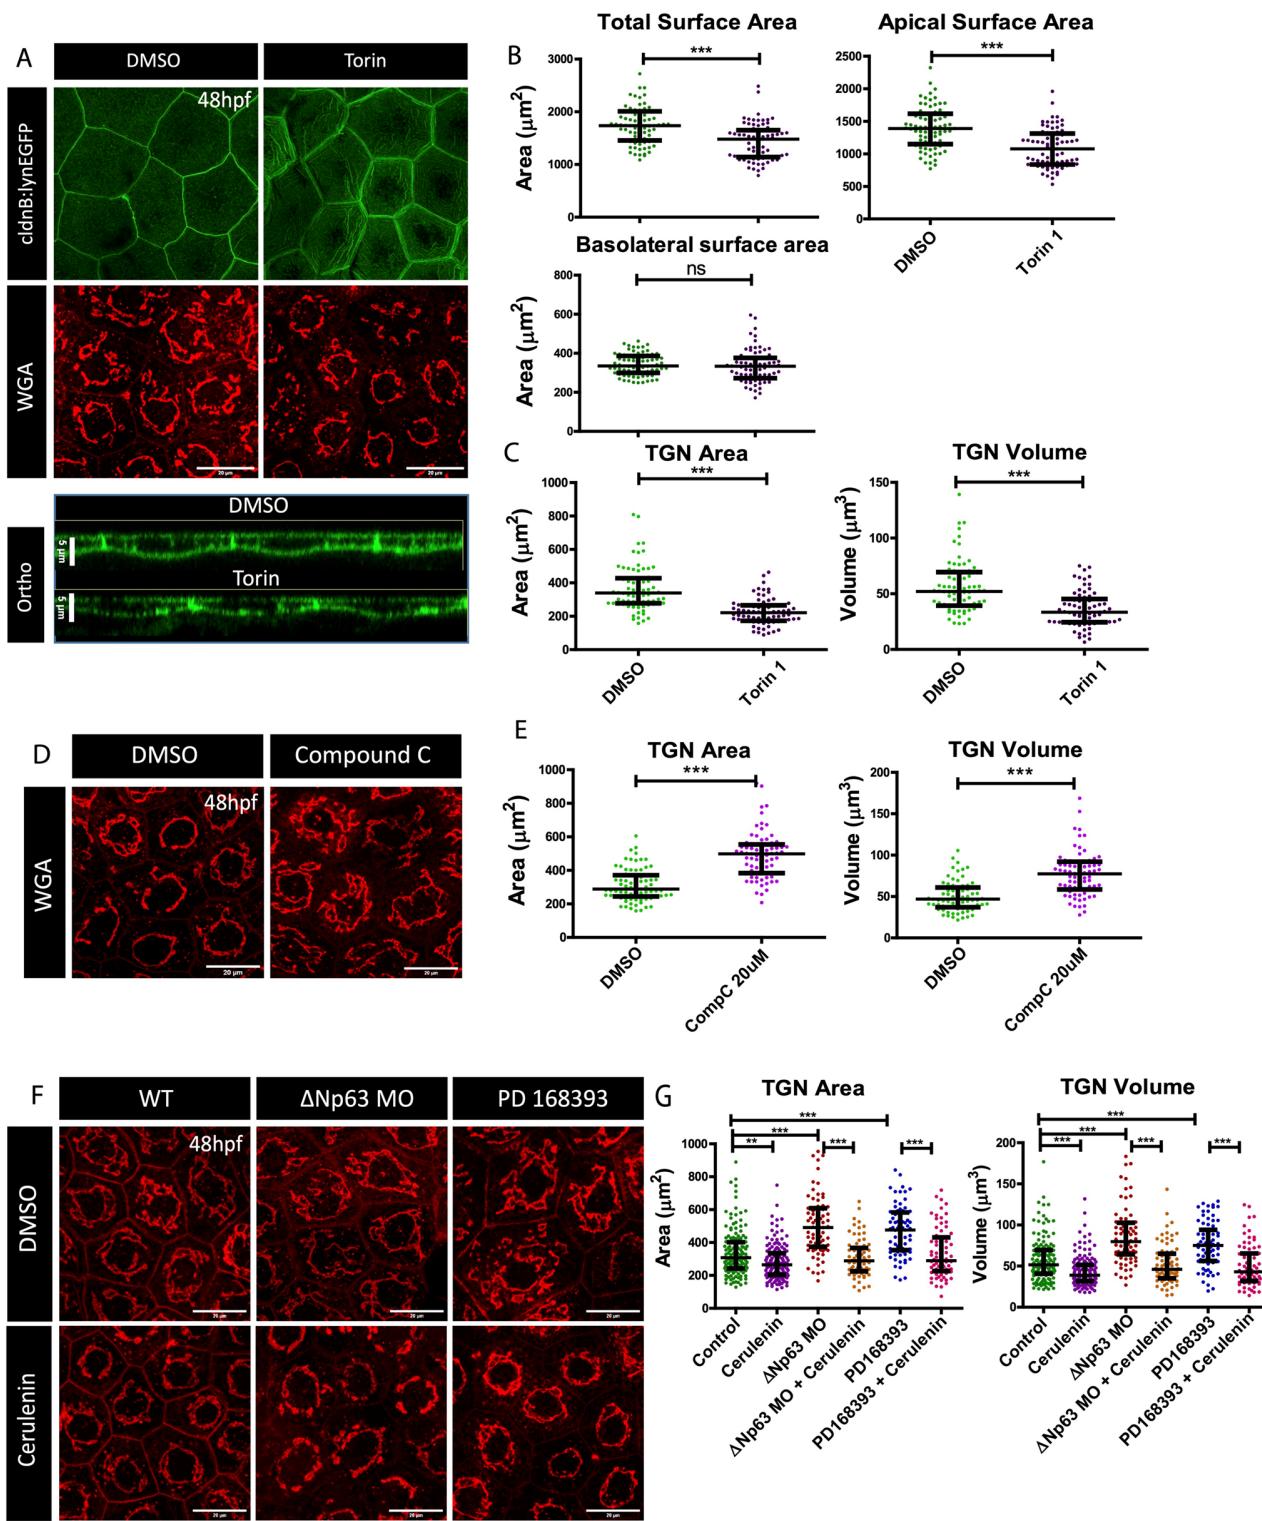

**Fig. S5.** Cerulenin treatment leads to a decrease in FASN levels while Rapamycin treatment results in a reduction in both pS6 and FASN levels in the peridermal cells. Immunostainings using anti-GFP (A, B, C), anti-pS6 (B) and anti-FASN (A, C) antibodies followed by confocal microscopy of 48h old embryos from the *Tg(cldnB:lynEGFP)* line treated with (A) Cerulenin and (B, C) Rapamycin Scale bars in A, B and C equals to 20 $\mu$ .

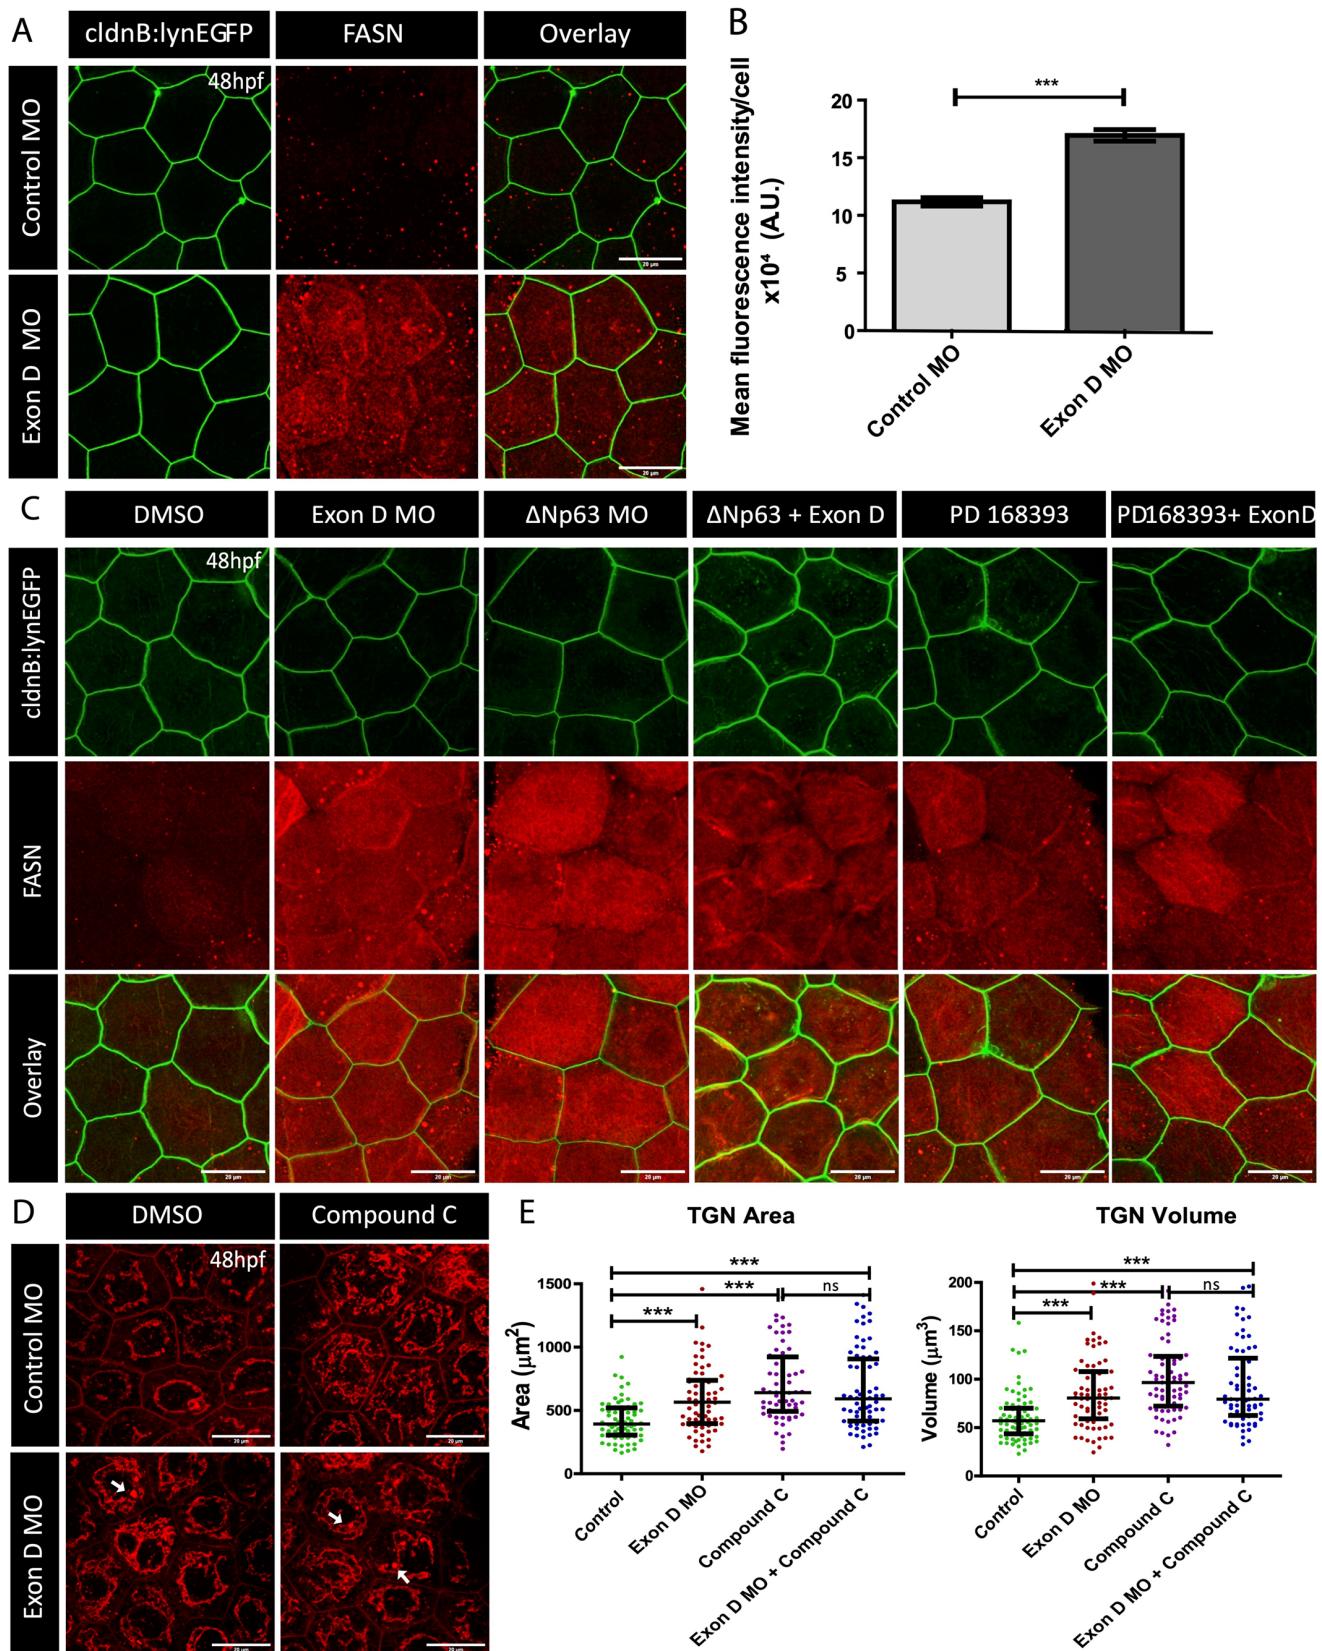

**Fig. S6.** Compound C treatment activates mTOR signaling and results in increased cell size in the zebrafish embryonic periderm.

Immunostaining using anti-GFP (A, B, C), anti-pS6 (A) and anti-FASN (B) antibodies at 48 hpf followed by confocal microscopy on embryos obtained from *Tg(cldnB:lynEGFP)* line and treated with compound C and DMSO as a vehicle control (A-C). Note that Compound C treated embryos display increased levels of mTOR downstream target - (A) pS6, and (B) FASN, and (C) increased size of peridermal cells. (D) Quantifications of the total, apical and basolateral surface area, and cell height in Compound C treated embryos.  
Scale Bars in A-C (X-Y plane) correspond to 20 $\mu$  and in C (Y-Z plane) to 5 $\mu$ . Asterisks in D indicate statistically significant difference at p<0.05 (refer to Table S10).

**Fig. S7.** mTOR signaling and FASN regulates cell size and TGN morphology in the peridermal cells.

(A) Confocal scans along X-Y and Y-Z planes of the peridermal cells from the embryos at 48hpf treated with DMSO or Torin 1, and stained using anti-GFP antibody and WGA (TGN). (B) Graphical representation of quantification of total, apical, and basolateral surface area, and (C) TGN area and volume upon Torin 1 treatment. Confocal micrographs showing WGA marked peridermal TGN of (D) Compound C treated embryos or (F) Cerulenin treated  $\Delta$ Np63 morphants and PD16393 delivered embryos. (E, G) Quantifications of TGN surface area and volume in given genetic conditions and/or under given treatments. Scale bars: X-Y plane = 20 $\mu$ ; Y-Z plane = 5 $\mu$ . Asterisks in B, C, E and G denote the statistically significant difference at p<0.05. ns = not significant. Note that only the essential comparisons are shown in G. For the complete list of comparisons please refer to Table S11.

**Fig. S8.** FASN is upregulated upon cell proliferation inhibition in Exon D morphant; TGN expansion phenotype in Compound C treated embryos is not rescued upon Exon D knockdown.

Confocal images of the peridermal cells of 48hpf control and Exon D morphant *Tg(cldnB:lynEGFP)* embryos showing (A) FASN immunostaining and (B) intensity quantification. (C) Confocal images of the peridermal cells of 48hpf control and Exon D morphant embryos in *Tg(cldnB:lynEGFP)* background under cell proliferation inhibition ( $\Delta$ Np63 MO and PD16393 treatment) paradigms showing FASN immunostaining. (D) Confocal micrographs of WGA marked TGN in Exon D morphant *Tg(cldnB:lynEGFP)* embryos treated with Compound C or DMSO and (E) quantification of TGN surface and volume.

Scale bars in A, C and D = 20  $\mu$ . White arrows in D point to post trans-Golgi vesicles.

Asterisks in B and E denote the statistically significant difference at  $p<0.05$ . Only essential pairwise comparisons are shown in E. For the complete list of pairwise comparisons please refer to Table S12.

**Table S1.** Statistical analyses for quantitative data in Figure 2.

(A) Statistical analysis for comparing TGN surface area and volume between control embryos and Exon D morphants as shown in Figure 2D:

Table Analyzed	TGN Surface Area
Column A	WT control
vs	vs
Column B	ExonD MO
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed

ExonD WGA vs ExonD LAMP1-WGA	2.600	No	ns

**Table S10.** Statistical comparison for cell surface area as shown in Supplementary Figure 6D.

Table Analyzed	Total Surface Area
Column A	DMSO
vs	vs
Column B	Compound C
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	3695 , 7630
Mann-Whitney U	845

Table Analyzed	Apical Surface Area
Column A	DMSO
vs	vs
Column B	Compound C
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	3895 , 7430
Mann-Whitney U	1045

Table Analyzed	Basolateral Surface Area
Column A	DMSO
vs	vs
Column B	Compound C
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	3654 , 7671
Mann-Whitney U	804

Table Analyzed	Cell height
Column A	DMSO
vs	vs
Column B	Compound C
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	4459 , 6866
Mann-Whitney U	1609

**Table S11.** Statistical comparison for cell surface area, and TGN surface area and volume as shown in Supplementary Figure 7.

(A) Statistical analysis for cell surface area quantification in Supplementary Figure 7B.

Table Analyzed	Total Surface Area
Column A	DMSO
vs	vs
Column B	Torin 1
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	7015 , 4310
Mann-Whitney U	1460

Table Analyzed	Apical Surface Area
Column A	DMSO
vs	vs
Column B	Torin 1
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	7101 , 4224
Mann-Whitney U	1374

Table Analyzed	Basolateral Surface Area
Column A	DMSO
vs	vs
Column B	Torin 1
Mann Whitney test	
P value	0.2757
Exact or approximate P value?	Gaussian Approximation
P value summary	ns
Are medians signif. different? (P < 0.05)	No
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	5953 , 5372
Mann-Whitney U	2522

(B) Statistical analysis for TGN surface area and volume quantification in Supplementary Fig 7C

Table Analyzed	TGN Surface Area
Column A	DMSO
vs	vs
Column B	Torin 1
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	7570 , 3755
Mann-Whitney U	905

Table Analyzed	TGN Volume
Column A	DMSO
vs	vs
Column B	Torin 1
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	7184 , 4141
Mann-Whitney U	1291

(C) Statistical analysis for TGN surface area and volume quantification in Supplementary Figure 7E

Table Analyzed	TGN Surface Area
Column A	DMSO
vs	vs
Column B	Compound C
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	3626 , 7699
Mann-Whitney U	776

Table Analyzed	TGN Volume
Column A	DMSO
vs	vs
Column B	Compound C
Mann Whitney test	
P value	< 0.0001
Exact or approximate P value?	Gaussian Approximation
P value summary	***
Are medians signif. different? (P < 0.05)	Yes
One- or two-tailed P value?	Two-tailed
Sum of ranks in column A,B	3943 , 7382
Mann-Whitney U	1093

## (D) Statistical analysis for TGN surface area and volume quantification in Supplementary Figure 7G

Table Analyzed	TGN Surface Area		
Kruskal-Wallis test			
P value	< 0.0001		
Exact or approximate P value?	Gaussian Approximation		
P value summary	***		
Do the medians vary signif. (P < 0.05)	Yes		
Number of groups	6		
Kruskal-Wallis statistic	142.8		
Dunn's Multiple Comparison Test	Difference in rank sum	Significant? P < 0.05?	Summary
DMSO vs Cerulenin	73.93	Yes	**
DMSO vs ΔNp63 MO	-161.4	Yes	***
DMSO vs ΔNp63 MO + Cerulenin	33.53	No	ns
