Cover: Lung from an E18.5 *Pofut1^{cnnull}* mouse showing that disruption of Notch signalling results in airways overpopulated by ciliated (*Foxj1*-positive nuclear staining, brown) and neuroendocrine (negative epithelial clusters, green) cells, without secretory cells. See Research article by Tsao et al. on p. 2297.

Ross Poché and Benjamin Reese review unusual features of retinal horizontal cell development, including their migratory behaviour, their morphological plasticity and their timing of cell division, and discuss the implications for the development of the central nervous system in general. See Review on p. 2141.
