

Development

Cover: Immunofluorescent staining for amylase (purple) and E-cadherin (light blue) on a cryosection of E16.5 mouse pancreas. Modified in Photoshop v4 using the Glow Edge stylize filter. See Research article by Petzold et al. on p. 126.

Determinants of cell polarity dictate the behaviour of many cell types during development. Recent work in yeast, worms and flies, reviewed here by Barry Thompson, has combined computer modelling with experimental analysis to reveal the mechanisms that drive the polarisation of such determinants. See Review on p. 13.
