

JEEM

Journal of Embryology and Experimental Morphology

| | |
|--|---------|
| Wylie, C. C., Brown, D., Godsave, S. F., Quarmby, J. and Heasman, J. The cytoskeleton of <i>Xenopus</i> oocytes and its role in development | 1-15 |
| Hausen, P., Wang, H. Y., Dreyer, C. and Stick, R. Distribution of nuclear proteins during maturation of the <i>Xenopus</i> oocyte | 17-34 |
| Taylor, M. A., Robinson, K. R. and Smith, L. D. Intracellular pH and ribosomal protein S6 phosphorylation: role in translational control in <i>Xenopus</i> oocytes | 35-52 |
| Malacinski, G. M. and Barone, D. Towards understanding paternal extragenic contributions to early amphibian pattern specification: the axolotl <i>ts-1</i> gene as a model system | 53-68 |
| Cooke, J. The system specifying body position in the early development of <i>Xenopus</i> , and its response to early perturbations | 69-87 |
| Gimlich, R. L. Cytoplasmic localization and chordamesoderm induction in the frog embryo | 89-111 |
| Dawid, I. B., Haynes, S. R., Jamrich, M., Jonas, E., Miyatani, S., Sargent, T. D. and Winkles, J. A. Gene expression in <i>Xenopus</i> embryogenesis | 113-124 |
| Gurdon, J. B., Mohun, T. J., Brennan, S. and Cascio, S. Actin genes in <i>Xenopus</i> and their developmental control | 125-136 |
| Slack, J. M. W., Cleine, J. H. and Smith, J. C. Regional specificity of glycoconjugates in <i>Xenopus</i> and axolotl embryos | 137-153 |
| Jones, E. A. Epidermal development in <i>Xenopus laevis</i> : the definition of a monoclonal antibody to an epidermal marker | 155-166 |
| Duprat, A. M., Kan, P., Gualandris, L., Foulquier, F., Marty, J. and Weber, M. Neural induction: embryonic determination elicits full expression of specific neuronal traits | 167-183 |
| Keller, R. E., Danilchik, M., Gimlich, R. L. and Shih, J. The function and mechanism of convergent extension during gastrulation of <i>Xenopus laevis</i> | 185-209 |
| Boucaut, J. C., Darribere, T., Li, S. D., Boulekbache, H., Yamada, K. M. and Thiery, J. P. Evidence for the role of fibronectin in amphibian gastrulation | 211-227 |
| Gordon, R. A review of the theories of vertebrate neurulation and their relationship to the mechanics of neural tube birth defects | 229-255 |
| Satoh, N. Recent advances in our understanding of the temporal control of early embryonic development in amphibians | 257-270 |
| Ford, C. C. Maturation promoting factor and cell cycle regulation | 271-284 |
| Laskey, R. A. Chromosome replication in early development of <i>Xenopus laevis</i> | 285-295 |
| Heasman, J., Snape, A., Smith, J. C. and Wylie, C. C. Single cell analysis of commitment in early embryogenesis | 297-316 |
| Smith, J. C., Dale, L. and Slack, J. M. W. Cell lineage of labels and region-specific markers in the analysis of inductive interactions | 317-331 |
| Nieuwkoop, P. D. Inductive interactions in early amphibian development and their general nature | 333-347 |
| Grunz, H. Information transfer during embryonic induction in amphibians | 349-363 |
| Warner, A. E. The role of gap junctions in amphibian development | 365-380 |
