

**Cover:** Photoreceptors in *Drosophila* adult compound eyes. The number of rhabdomeres (marked with phalloidin staining; green) within photoreceptors (outlined with  $\text{Na}^+/\text{K}^+$ -ATPase staining; magenta) is decreased in *dDBT*-deficient *Drosophila* compared to that in wild type, indicating that loss of *dDBT* activity results in neuronal damage. See article by Tsai et al. (dmm044750). Cover image is licensed under a Creative Commons Attribution 4.0 International license.

## EDITORIAL

DMM Outstanding Paper Prize 2019 winner: Alessandro Bailetti  
**Hackett, R.**
