ABOUT THE PUBLISHER

The Company of Biologists was established in 1925. It is a non-profit organisation whose objective is to publish high-quality scientific journals and to promote research in all branches of biology. The Company Directors receive no remuneration, and their task is to ensure that the Company continues to provide a relevant and worthwhile service to the international community of biologists. In addition to financing its four journals, the Company provides grants to scientific societies, travelling fellowships to junior scientists and supports activities such as workshops and conferences. The world's poorest nations receive free and unrestricted access to the Company's journals.
