

Cover: Frontal view of a wild-type *Drosophila melanogaster* head (confocal microscopy capturing autofluorescence) courtesy of Vilaiwan M. Fernandes, who is currently conducting postdoctoral research in Claude Desplan's lab, New York University (<https://www.nyu.edu/projects/desplan/>).

**SUBJECT COLLECTION:
SPOTLIGHT ON DROSOPHILA: TRANSLATIONAL
IMPACT**

EDITORIAL

- 229 Fruit flies on the front line: the translational impact of *Drosophila*
Perrimon, N., Bonini, N. M. and Dhillon, P.

OBITUARY

- 233 In memory of Marcos Vidal (1974–2016)
Cagan, R. and Gottlieb, E.

AT A GLANCE

- 235 *Drosophila* tools and assays for the study of human diseases
Ugur, B., Chen, K. and Bellen, H. J.

SPECIAL ARTICLE

- 245 FlyBase portals to human disease research using *Drosophila* models
Millburn, G. H., Crosby, M. A., Gramates, L. S., Tweedie, S. and the FlyBase Consortium.

REVIEWS

- 253 Modeling congenital disease and inborn errors of development in *Drosophila melanogaster*
Moulton, M. J. and Letsou, A.
- 271 The interplay between intestinal bacteria and host metabolism in health and disease: lessons from *Drosophila melanogaster*
Wong, A. C. N., Vanhove, A. S. and Watnick, P. I.

RESEARCH ARTICLES

- 283 Glial expression of Swiss cheese (SWS), the *Drosophila* orthologue of neuropathy target esterase (NTE), is required for neuronal ensheathment and function
Dutta, S., Rieche, F., Eckl, N., Duch, C. and Kretzschmar, D.
- 295 The calcineurin inhibitor Sarah (Nebula) exacerbates A β 42 phenotypes in a *Drosophila* model of Alzheimer's disease
Lee, S., Bang, S. M., Hong, Y. K., Lee, J. H., Jeong, H., Park, S. H., Liu, Q. F., Lee, I.-S. and Cho, K. S.
- 307 Tau excess impairs mitosis and kinesin-5 function, leading to aneuploidy and cell death
Bougé, A.-L. and Parmentier, M.-L.
- 321 Assessing a peptidylic inhibitor-based therapeutic approach that simultaneously suppresses polyglutamine RNA- and protein-mediated toxicities in patient cells and *Drosophila*
Zhang, Q., Tsoi, H., Peng, S., Li, P. P., Lau, K.-F., Rudnicki, D. D., Ngo, J. C.-K. and Chan, H. Y. E.
- 335 Cardiomyocyte-specific conditional knockout of the histone chaperone HIRA in mice results in hypertrophy, sarcolemmal damage and focal replacement fibrosis
Valenzuela, N., Fan, Q., Fa'ak, F., Soibam, B., Nagandla, H., Liu, Y., Schwartz, R. J., McConnell, B. K. and Stewart, M. D.
- 347 Mouse myofibers lacking the SMYD1 methyltransferase are susceptible to atrophy, internalization of nuclei and myofibrillar disarray
Stewart, M. D., Lopez, S., Nagandla, H., Soibam, B., Benham, A., Nguyen, J., Valenzuela, N., Wu, H. J., Burns, A. R., Rasmussen, T. L., Tucker, H. O. and Schwartz, R. J.
