

Supplemental Data Figure S2. Lung inflammation associated with the loss of $\alpha 3$ laminin. **(A)** Wild-type or *Lama3^{fl/fl}* mice were treated Ad-Null or Ad-Cre and 60 days later a BAL was performed for measurement of total cell count (hemacytometer). **(B)** BAL fluid cells were quantified using flow cytometry, **(C)** Expression of the macrophage activation marker MHC Class II on BAL fluid macrophages was quantified using flow cytometry. Values above graphs indicate P values for comparison between Null and Cre. $N \geq 3$ for all measures.
