Figure S2. PAS2 expression and phenotype in the root.
(A) Expression of pPAS2:PAS2-GFP complements pas2-1 developmental defects. Scale bar, 200µm. (B) pPAS2:PAS2-GFP expression in 5-day-old seedlings. Scale bar, 100 µm. (C) pas2-1 mutant displays reduced elongation zone compared to the wild type. Length of the elongation zone of pas2-1 and wild type. Data are the mean ± sd from three independent experiences (n=30). Significant (P<0.05 Student’s t-test) differences are indicated by an asterisk.
