

Supplementary Data

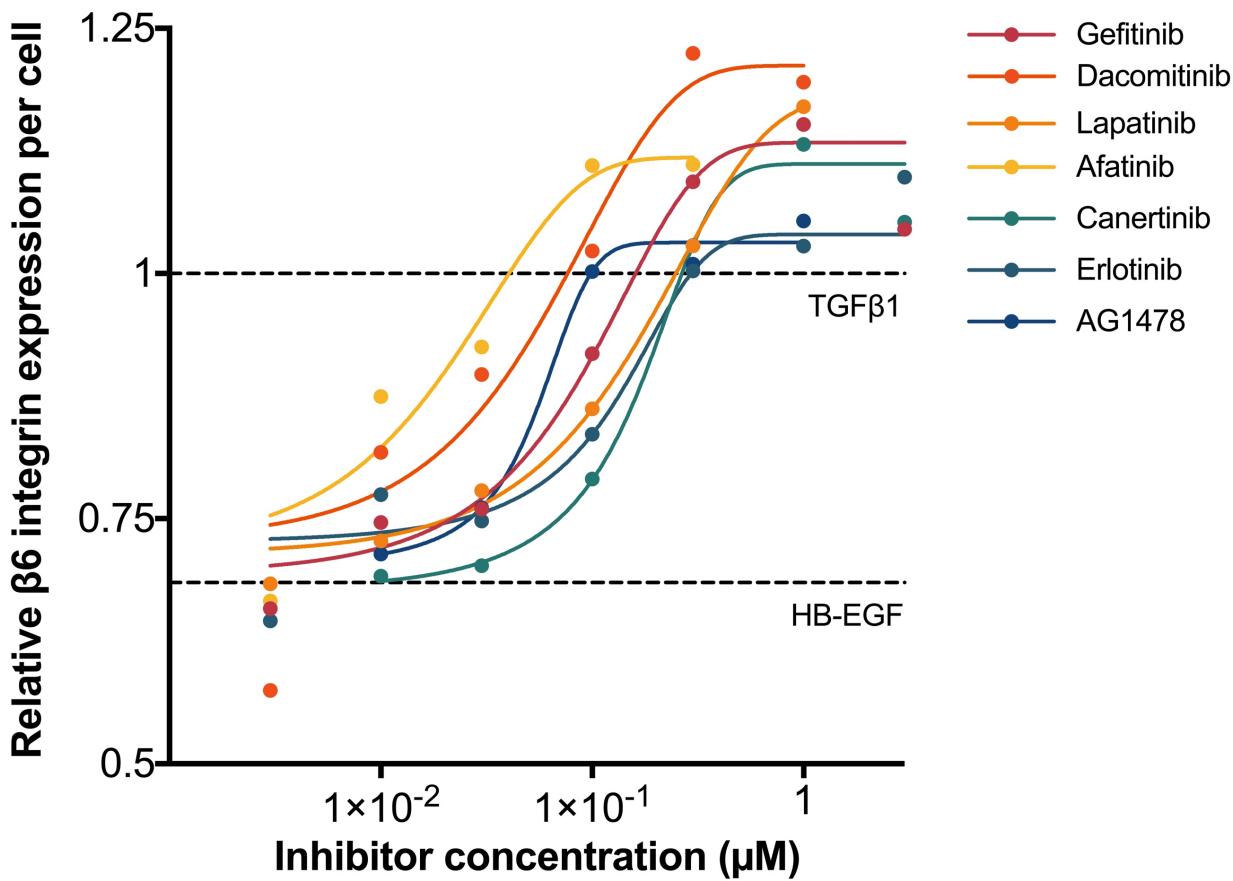

Figure S1. EGFR inhibitors block HB-EGF-induced $\beta 6$ integrin downregulation in GECs. GECs were first treated with TGF- $\beta 1$ for 24 h and then with HB-EGF in the presence or absence of different concentrations (0.003–3 μM) of EGFR inhibitors tyrphostin AG1478, gefitinib, afatinib, erlotinib, lapatinib, dacomitinib or canertinib for 48 h. Integrin $\beta 6$ expression relative to total cell numbers were assessed by In Cell Western blotting. Means of 3–6 experiments are presented.
