

INDEX

- Acute myeloid leukaemia *see* Leukaemia
- Alkaline phosphatase, activity with
hydrocortisone 69–70
- cAMP, as anti-growth signal 252–254
- Amphibians, embryology study 258
- Angiogenesis, avians 37–43
- Ascaris*, development 1–2
- Ascidian, embryos 3
- Ascites
cells, mitotic activity 238
self-limiting 231
- Astrocytes 77–81
- Asymmetric development 1–8
in carcinoma cells 6
in haemopoiesis 7
Hydra 7
insects 6
nematodes 5
plants 4
vertebrates 7
yeasts 3–4
- Avians
angiogenesis 37–43
embryo
haemopoietic stem cells 29–43
palate development 201
- Blast cell clones 267–277
- Blastocyst
compartments, multi-lineage cells 21
culture 14–15
gastrulation 18, 21
injection 15–16
reconstitution 15
- Bone, diagram, stromal cells 71
- Bone marrow
avian, haemopoietic cell origins 73
cell cycle 249
differentiation, single colonies 68–69
ectopic transplantation 66–68
in vitro/in vivo, relationship 69–71
stromal tissue, stem cells 63–73
- Breast cancers 98–99, 200
see also Mammary gland
- Calcium ions, cell regulation 244
- Cambium, asymmetric division 4
- Cancer, of breast 98–99, 200
- Cancer therapy, physiological feedback
regulators 231–232
- Carcinogenesis
cutaneous, two stage 251–253
target cells 256–258
- Carcinoma, embryonal *see* Embryonal
carcinoma
- Cell division, asymmetric development 2–3
- Cell lineage
epidermal proliferative units 248
infidelity 275–276
malignant, terminal differentiation 171–176
mammalian embryo 11–22
mechanisms, extrinsic/intrinsic 3
O-2A progenitor cells 81
optic nerve, macroglial cells 78
retroviral markers 91
small intestine 253–255
see also Haemopoiesis
- Cell markers, *in situ* methods 12, 14, 18
- Central nervous system
O-2A progenitor cells 77–80
optic nerve macroglial cells 77–81
- CFCs *see* Colony stimulating cells
- CFUs *see* Colony forming units
- Chalone hypothesis 232
- Chemotherapy, ara-C 270
- Chimaerism
chick–quail 30–43
in conceptuses 19–20
- Chinese hamster, spermatogenesis 181–190
- Cholera toxin, effect on cell colonies 90
- Ciliary neurotrophic factor 80
- Cis*-control of erythroid gene-expression
145–154
- Clonal analysis, genes as cell markers 12
- Clones, holo-, a-, mero- (defined) 88
- Clonogenic cells, intestine 255–256
- CNTF *see* Ciliary neurotrophic factor
- Collagen
types I, III 70
type IV 69, 71
type IX, as linker molecule 205–206
- Colony forming cells, spleen, haemopoietic
233–240
- Colony forming units
fibroblastic 63–73
spleen 132, 137–139
haemopoietic 233–240
- Colony stimulating factors
acute myeloid leukaemia 268–277
definition 131
effect of proto-oncogene mRNA induction
250
see also Interleukin-3
- Cytosine arabinoside 276
- DHSS *see* DNase I-hypersensitive sites

- Differentiation inhibitory activity peptide 263
- Diffusion chambers 64
bone marrow differentiation 65–66
- DNase I-hypersensitive sites 148
- ECM *see* Extracellular matrix
- Ectoderm, primitive 17–21
- EMA *see* Epithelial membrane antigen
- Embryo
mammal
inner cell mass, and trophectoderm 14
multi-lineage progenitor cells 11–22
trophectoderm 13
primitive ectoderm 17–21
primitive endoderm 17
- Embryonal carcinoma cells (EC) 20
PC13 END 259–260
- Embryonal stem cells (ES) 20–21
- Embryonic stem cells
differentiation 262–264
inducers/inhibitors 264
regulatory factors 257–265
- Emerogenes 176
- Endoderm, primitive 17
- Endothelial cells, avian, specific markers 37–41
- Epidermal growth factor 249
- Epidermis
homeostasis 90–93
proliferation kinetics 86–87
proliferative units 246
diagram 248
stem cells 245
in culture 85–93
terminal differentiation 85, 90–91
transit amplifying cells 88
- Epithelial membrane antigen 96
- Epithelial stem cells
transformation into mesenchyme 205
in vivo 245–259
- Erythroblasts, virally infected spleen colonies 140–141
- Erythroid committed burst-forming unit 236
- Erythroid progenitor cells 132
- Erythroleukaemia cells 150, 152
- Erythropoiesis
cloning and characterization of genes 147–148
GATAAG motif 151–152
globin genes 148–149
non-globin genes 148–149
regulation 152–154
regulation, *Mus* α -globin 149–151
scheme 146
small intestine 248
- Erythropoietin 37
function 237
- Extracellular matrix
biosynthesis 209–210
mesenchyme–epithelial interactions 196–197
in palate development 203–207
- FCFC *see* Colony forming cells, fibroblastic
- FCS (foetal calf serum) 79
- Feedback regulators
negative feedback 232
normal tissue tumours 231–240
- Fibroblast growth factors
acidic FGF 260
action 249
basic FGF 260
- Fibroblast morphotypes 117–121
- Fibroblast stem cells
differentiation *in vitro*, man 115–129
primary 117–121
secondary 121–125
- Fibronectin 198, 199
- 5-Fluorouracil, pretreatment, bone marrow 131, 134, 135
- Foetal calf serum 68
- 5-FU *see* 5-Fluorouracil
- β -Galactosidase, marker gene 91–93
- GAP *see* GTPase
- Gastrulation 18
- Gene losses, and tumour development 175
- Gene regulation, in erythropoiesis 149–151
- Gene transfer, recombinant retrovirus-mediated 131
- Germ-line, segregation 19
- Glial cell differentiation 77–81
- Globin genes 148–151
- Glutathione peroxidase genes 145, 147–148, 152–153
- Glycosaminoglycans
analysis, synthesis 211
synthesis, assessment 218
- Granulocyte–macrophages
growth, colony stimulating factor 131–137
assay 131, 133
viral titre 138–140
progenitors
colony formation 236
lactoferrin 237
- Granulopoiesis, inhibitors 236–237
- Growth factors
basic fibroblast GF 198–199
embryonic stem cells 257–265
in haemopoiesis 131–142
heparin-binding 257
insulin-like 259
maternally derived 221
mesenchyme–epithelial interactions 197–199

- oncogenes 171–176
 in palate development 209
 receptors
 insulin-like 247
 platelet-derived 247
 transforming growth factor β 198–199, 231, 239
see also Fibroblast growth factors
 Growth inhibitors 232
 GSHPX *see* Glutathione peroxidase
 GTPase activity
 and mutation 161–164
 protein 160, 166
 GTP-binding proteins 244
 GTP hydrolysis 160–161
 Haemopoiesis
 in birds 29–43
 angiogenesis 37–42
 clonal cultures 37
 E2 mesoderm 34–36
 E3–E4 para-aortic region 30–34
 vasculogenesis 37–40
 committed cells 236–237
 feedback regulators 231–240
 growth factors 131–132
 molecular events 243–254
 negative feedback regulatory loops 233–237
 in tumours 238–240
 stem cells 267–277
