Cover: In breast cancer cells, degradation of extracellular matrix by invadopodia is enhanced following phosphorylation of regulators of actin assembly and endocytosis by the protein tyrosine kinase Src. The confocal image shows an MDA-MB-231 cell that actively degrades fluorescent fibronectin (blue), and in which Cdc42-interacting protein 4 (CIP4, green) localises to Src-induced invadopodia that contain phosphorylated cortactin (red) near the cell periphery. See article by J. Hu et al. (pp. 1739-1751).
