

Cover: Angiopoietin-2 ligand induces Tie2-receptor translocation to the cell-matrix contacts (green) located at the tips of focal adhesions (red). Cells were allowed to spread on a collagen I substratum in the presence of native angiopoietin-2 followed by fixation and immunofluorescence staining. Focal adhesions are stained using an anti-vinculin antibody (red). Endothelial receptor tyrosine kinase Tie2 is green. See article by R. Pietilä et al. (pp. 2212–2223).
