

**Cover:** Wild-type *Drosophila* egg chamber stained with fluorescein-conjugated tomato lectin to visualize membranes (green), anti-Lva antibody to label the Golgi (red) and Alexa-Fluor-633-conjugated phalloidin to mark F-actin (blue). Regulation of trafficking and F-actin by plasma membrane phosphoinositides is essential for cortical integrity during oogenesis. See article by J. Tan et al. (pp. 954–966).

**Cell Science at a Glance**

- 923 Classes of phosphoinositide 3-kinases at a glance  
Jean, S. and Kiger, A. A.

**COMMENTARY**

- 929 Small regulators, major consequences –  $\text{Ca}^{2+}$  and cholesterol at the endosome–ER interface  
van der Kant, R. and Neefjes, J.

**SHORT REPORTS**

- 939 The SMN Tudor SIM-like domain is key to SmD1 and coilin interactions and to Cajal body biogenesis  
Tapia, O., Lafarga, V., Bengoechea, R., Palanca, A., Lafarga, M. and Berciano, M. T.
- 947 The endoplasmic reticulum exerts control over organelle streaming during cell expansion  
Stefano, G., Renna, L. and Brandizzi, F.

**RESEARCH ARTICLES**

- 954 *PI4KIII $\alpha$*  is required for cortical integrity and cell polarity during *Drosophila* oogenesis
