

Cover: Radial (orange, red and yellow) and chiral (cyan and blue) patterns of organization of the actin cytoskeleton (orange, red and cyan) and keratin network (yellow and blue) in keratinocytes and NBT-II rat bladder carcinoma cells (orange). Radial organization of the actin cytoskeleton in NBT-II cells was induced by treatment with EGF, while chiral actin and keratin organization in keratinocytes was induced by treatment with low doses of latrunculin A. See article by Salma Jalal et al. (jcs.220780).
