

**Cover:** The image shows the single flagellum of a *Leishmania* parasite changing its beating behaviour. It is a composite made from successive frames of a high-magnification, high-frame-rate video lasting just a few seconds. Successive frames run in columns from top left to bottom right, showing the fluorescently labelled flagellum switching from one beat type to another. See article by Z. Wang et al. (jcs246637).

## EDITORIAL

Love your lipids!
