Cover: Proof-of-concept experiment for ExBoX AAVs showing opposing regulation of CreOn-FlpOff-EGFP expression by recombinases. Cre co-injection turns on EGFP expression (green cells), whereas FlpO (co-expressed with mCherry, red cells) turns it off, even in the presence of Cre. Image credit: Teresa Ubina. See article by T. Ubina et al. (jcs257212).
