Table S1. The amount of paraffin oil and substance (in µl) used to standardize the stimuli according to their volatility; this ensured all stimuli had the same vapour pressure during the experiment

Substance	Vapour pressure (mmHg)	1/Vapour pressure	Substance (µl)	Paraffin oil (µl)
1-Hexanol	0.928	1.078	10.776	989.224
1-Octanol	0.0794	12.594	125.945	874.055
Octanal	1.18	0.847	8.475	991.525
2-Octanone	1.35	0.741	7.407	992.593
Hexanal	11.3	0.088	0.885	999.115
2-Hexanone	11.6	0.086	0.862	999.138
