

Fig. S1. The ten path models (A-J) depicting the relationships among morphological and performance traits with dominance for male Hemidactylus frenatus. The same path models were used for examining the relationships among morphology, performance and prey capture (substituting prey capture measurements for dominance).

Table S1. Path model output for the dominance trials comparing all 10 models that describe the relationships among morphological and performance traits with dominance in male Hemidactylus frenatus. Where $\chi^{2}=$ Chi square goodness of fit, $\mathrm{df}=$ degrees of freedom, $K=$ number of parameters, $\mathrm{AIC}_{\mathrm{C}}=$ the Akaike information criterion, $w_{i}=$ the Akaike weight and Rank $=$ ranking order for all 10 models. Model I is more than $35 \%$ likely to be the best predictor of the relationship among morphological and performance traits and dominance.

| Model | $\chi^{\mathbf{2}}$ | d.f. | $\boldsymbol{K}$ | AIC $_{\mathbf{C}}$ | $\boldsymbol{w}_{\boldsymbol{i}}$ | Rank |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Model A (Fig. S1-A) | 0.2 | 1 | 34 | 484.1 | 0.000 | 10 |
| Model B (Fig. S1-B) | 2.7 | 3 | 32 | 308.4 | 0.000 | 9 |
| Model E (Fig. S1-C) | 1.1 | 2 | 25 | 84.0 | 0.000 | 8 |
| Model F (Fig. S1-D) | 0.8 | 2 | 25 | 83.6 | 0.000 | 7 |
| Model C (Fig. S1-E) | 1.2 | 4 | 23 | 56.2 | 0.021 | 5 |
| Model D (Fig. S1-F) | 1.5 | 4 | 23 | 56.5 | 0.017 | 6 |
| Model G (Fig. S1-G) | 17.9 | 6 | 21 | 51.2 | 0.256 | 2 |
| Model H (Fig. S1-H) | 18.7 | 6 | 21 | 52.1 | 0.167 | 4 |
| Model I (Fig. S1-I) | $\mathbf{2 6 . 5 1}$ | $\mathbf{7}$ | $\mathbf{2 0}$ | $\mathbf{5 0 . 7}$ | $\mathbf{0 . 3 2 5}$ | $\mathbf{1}$ |
| Model J (Fig. S1-J) | 27.4 | 7 | 20 | 51.6 | 0.212 | 3 |

Table S2. Path model output for prey capture trials comparing all 10 models that describe the relationships among morphological and performance traits with prey capture (represented by dominance in graphical model - see Fig. S1) in male Hemidactylus frenatus. Where $\chi^{2}=$ Chi square goodness of fit, $\mathrm{df}=$ degrees of freedom, $K=$ number of parameters, $\mathrm{AIC}_{\mathrm{C}}=$ the Akaike information criterion, $w_{i}=$ the Akaike weight and Rank $=$ ranking order for all 10 models. Model G is more than $60 \%$ likely to be the best predictor of the relationship among morphological and performance traits and prey capture.

| Model | $\chi^{\mathbf{2}}$ | d.f. | $\boldsymbol{K}$ | AIC $_{\mathbf{C}}$ | $\boldsymbol{w}_{\boldsymbol{i}}$ | Rank |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Model A (Fig. S1-A) | 0.4 | 1 | 35 | 640.4 | 0.000 | 10 |
| Model B (Fig. S1-B) | 2.0 | 3 | 32 | 307.7 | 0.000 | 9 |
| Model E (Fig. S1-C) | 1.1 | 2 | 25 | 84.0 | 0.000 | 7 |
| Model F (Fig. S1-D) | 1.7 | 2 | 25 | 84.6 | 0.000 | 8 |
| Model C (Fig. S1-E) | 2.5 | 4 | 23 | 57.5 | 0.000 | 6 |
| Model D (Fig. S1-F) | 3.1 | 4 | 23 | 58.1 | 0.000 | 5 |
| Model G (Fig. S1-G) | $\mathbf{5 . 2}$ | $\mathbf{6}$ | $\mathbf{2 1}$ | $\mathbf{3 8 . 6}$ | $\mathbf{0 . 6 0 0}$ | $\mathbf{1}$ |
| Model H (Fig. S1-H) | 6.4 | 6 | 21 | 39.7 | 0.345 | 2 |
| Model I (Fig. S1-I) | 21.3 | 7 | 20 | 45.5 | 0.019 | 4 |
| Model J (Fig. S1-J) | 20.2 | 7 | 20 | 44.4 | 0.033 | 3 |
