

CORRECTION

A nicotinic acetylcholine receptor agonist affects honey bee sucrose responsiveness and decreases waggle dancing

Daren M. Eiri and James C. Nieh

There was an error published in *J. Exp. Biol.* **215**, 2022-2029.

In the final sentence of paragraph 4 of 'Effects on SR' in the Results section, the total number of proboscis extensions is given, rather than percentages. The correct sentence is published below.

On average, control nectar foragers had a lower mean total PER bee⁻¹ (4.1 ± 2.3 responses) than control pollen foragers (4.8 ± 2.1 responses).

The authors apologise for any confusion this may have caused.
