

Fig. S1. RNA-seq analysis work flow

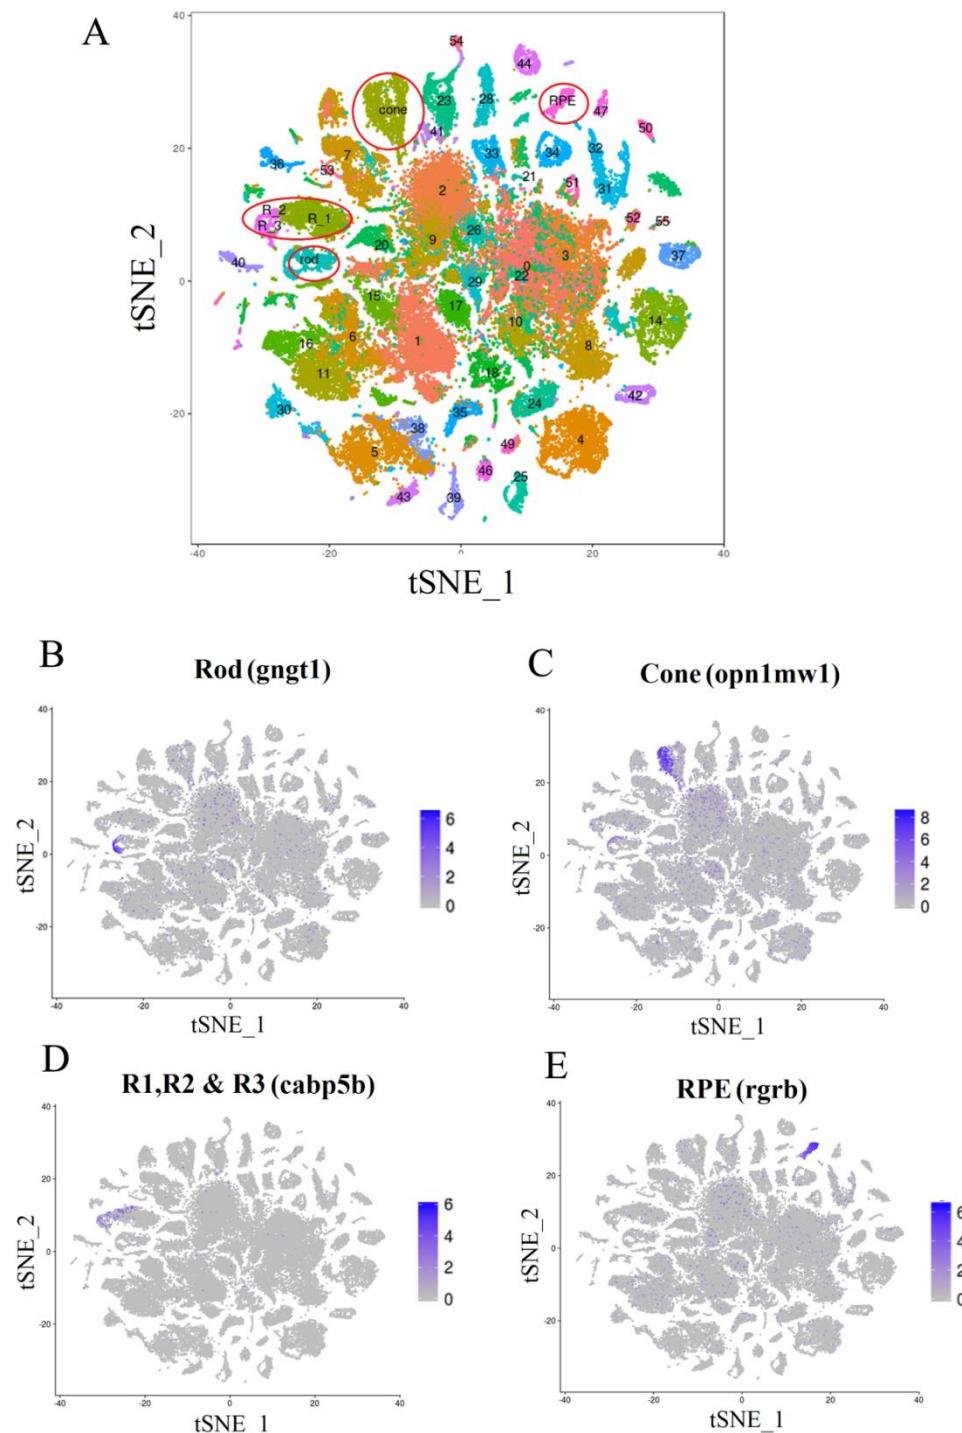

Fig. S2. Single cell transcriptome based cell clusters and marker gene expression pattern

A. tSNE representation of 55 distinct cell type clusters indicated by colour and numerical code. Retina associated cell type clusters were indicated by red circle. R_1, R_2 and R_3 are clusters encompass cell types of INL.

B-C.tSNE representation of cell type specific marker gene expression

Table S1. list of differentially expressing genes

ZT4 (day) upregulated genes are unshaded, while dark shade indicates genes upregulated in ZT16(night), of which novel transcripts are highlighted by blue shade.
