

Fig. S1. Mouthparts of a honey bee. (a) Mouthparts comprise three main parts: a pair of galeae, a pair of labial palpi and a glossa. Each segment of the glossa bears a ring of long hairs or microtrichia, which expand outwards as the glossa is extended into nectar. (b) Image of a feeding worker honey bee. (c) The glossal hairs are unfolding under the microscope, and their erection angle is θ . (d) The galeae and labial palpi form a feeding tube when a honey bee drinks sucrose solution.

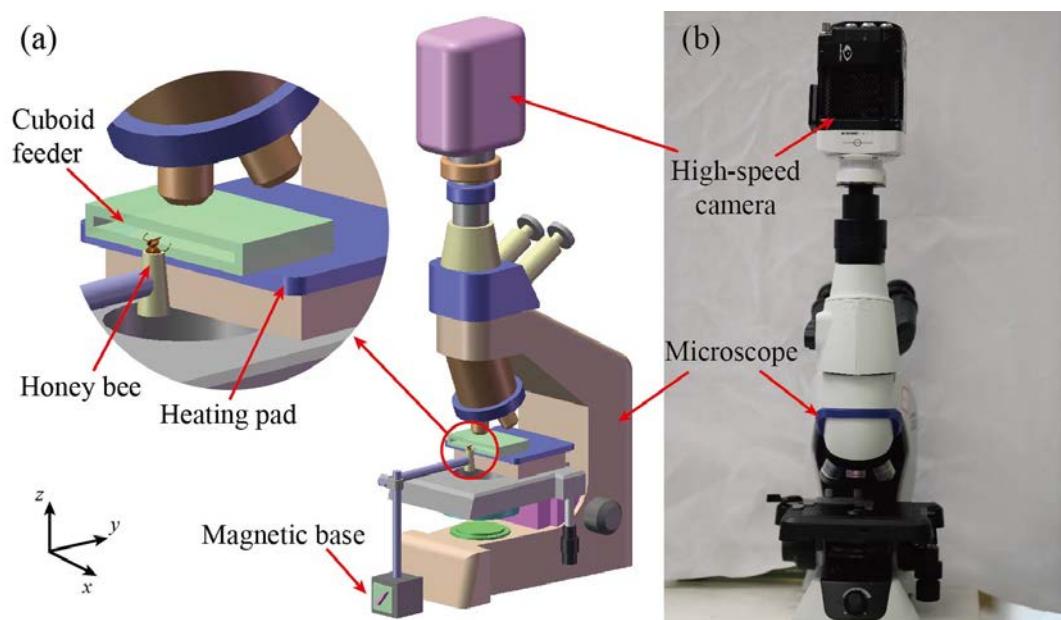

Fig. S2. Experimental setup for videography of the feeding process of a honey bee.

The specially designed system consisted of a high-speed camera (Phantom, Miro LC310, USA), a microscope (Olympus, CX33, Japan), and a heating pad (Fig. S2). The heating pad (temperature range $20^{\circ}\text{C} \sim 60^{\circ}\text{C}$, Smart-M, China) was used to maintain the temperatures of sucrose solutions. We operated this system to record the dipping processes of honey bees. In the experiments with Tylose, a digital viscometer (NDJ-5S, MINCEE, China) was used to measure the viscosity of sucrose solutions. The frame speed was 1000 fps.

(a) At the top-left corner, the enlarged figure shows that the temperature of sucrose solutions is kept constant by the heating pad. The cuboid feeder had 1 mm gap which was filled with sucrose solutions. (b) The movement of the proboscis is magnified by the microscope (5x) and filmed with the high-speed camera.

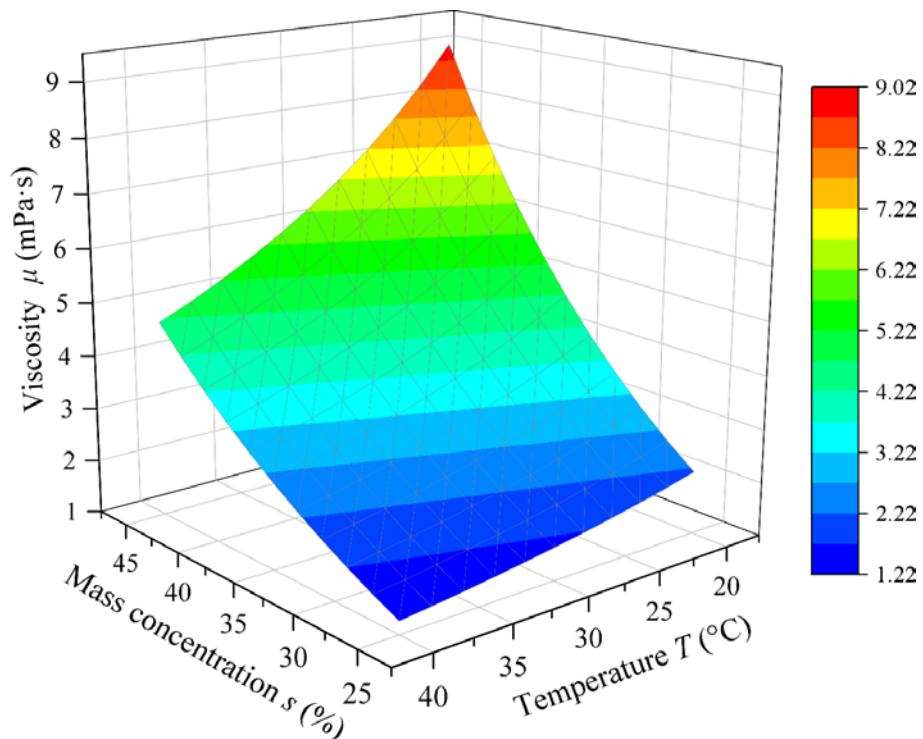

Fig. S3. Viscosity of sucrose solutions plotted against concentration and temperature.

We fit the viscosity formula and use the Origin software (Origin2018, OrigLab, USA) to plot a surface graph showing the relationship between viscosity μ , concentration s and temperature T .

Table S1. The glossal dipping frequency of honey bees fed different sucrose concentrations at different temperatures ($n = 10$ dipping cycles selected randomly from 3 videos for each group).

Sucrose concentration % w/w	Temperature (°C)	Dipping frequency (Hz)									
25	20	5.10	4.95	4.90	5.10	4.76	4.90	4.95	5.13	5.41	4.95
	25	5.10	5.21	4.67	5.75	6.13	4.85	4.83	5.38	6.06	4.88
