

Table S1. P-values obtained after two-way ANOVA analysis of parameters assessed in rainbow trout hypothalamus after incubation with 600 µl of culture media alone (control) or containing 8 mM glucose or 500 µM oleate, in the absence or presence of 1 µM insulin for 3 h. Nutrient (none, glucose, oleate) and insulin (absence, presence) treatments were the main factors, whereas nutrient x insulin was the first order interaction.

	Parameter	Factor 1	Factor 2	Interaction
		Nutrient	Insulin	Nutrient x Insulin
