

Fig. S1. Habitats of different *Oryzias* species

Natural environment for the different species in the *Oryzias* genus. **(S1A)** Typical habitats of *O. latipes* in Japan. *O. latipes* live in the small creeks, rice paddy fields (S1A1, 3) swims near surface water and tend to live in relatively shallow areas (Fig S1A 2and 4). **(S1B)** Habitats of *O. mekongensis* in Thailand. *O. mekongensis* inhabits ponds covered with water plants. **(S1C)** Habitats of *O. minutillus* in Thailand. *O. minutillus* lives in ponds and small creeks (S1C 1-3) but in the open water area - compare with *O. mekongensis* (Pictures are courtesy of Yusuka Takehana, Nagahama Institute of Bio-Science and Technology). **(S1D)** Habitats of *O. javanicus* in Malaysia. *O. javanicus* lives in brackish water (S1D2, 4) to seawater area (S1D 1 and 3) in the mangrove forests (Fig. S1D1, 4). **(S1E)** Habitats of *O. dancena* in Malaysia, which is similar with *O. javanicus*, but with lower salinity values, from freshwater (S1D 1) to brackish water (S1D 2) (Pictures are courtesy of Koji Inoue, University of Tokyo & Masato Kinoshita, Kyoto University). **(S1F)** Habitats of *O. nigrimas* in the Lake Poso, Sulawesi island. *O. nigrimas* live in near shore of the lake Poso (Fig S1F 1, 4) where it is important for fisheries activity in the lake (Fig S1F 2). **(S1G)** Habitats of *O. sarasinorum* in the lake Lindu, Sulawesi island. *O. sarasinorum* inhabit the relatively pelagic area in the lake Lindu. **(S1H)** Habitats of *O. matanensis* in the lake Matana, Sulawesi island. *O. matanensis* inhabits near the shore. **(S1I)** Habitats of *O. woworae* typically in clear springs in Mauna island, Sulawesi island. **(S1J)** Habitats of *O. celebensis*, in relatively fast running rivers. *Oryzias* species in Sulawesi island (*O. sarasinorum*, *O. nigrimas*, *O. matanensis*, *O. marmoratus* and *O. profundicola*) are relatively unique compared with other *Oryzias* species, since these species mainly live in deep tectonic lakes like Poso, Lindu, Matana, Towti and Maholona.

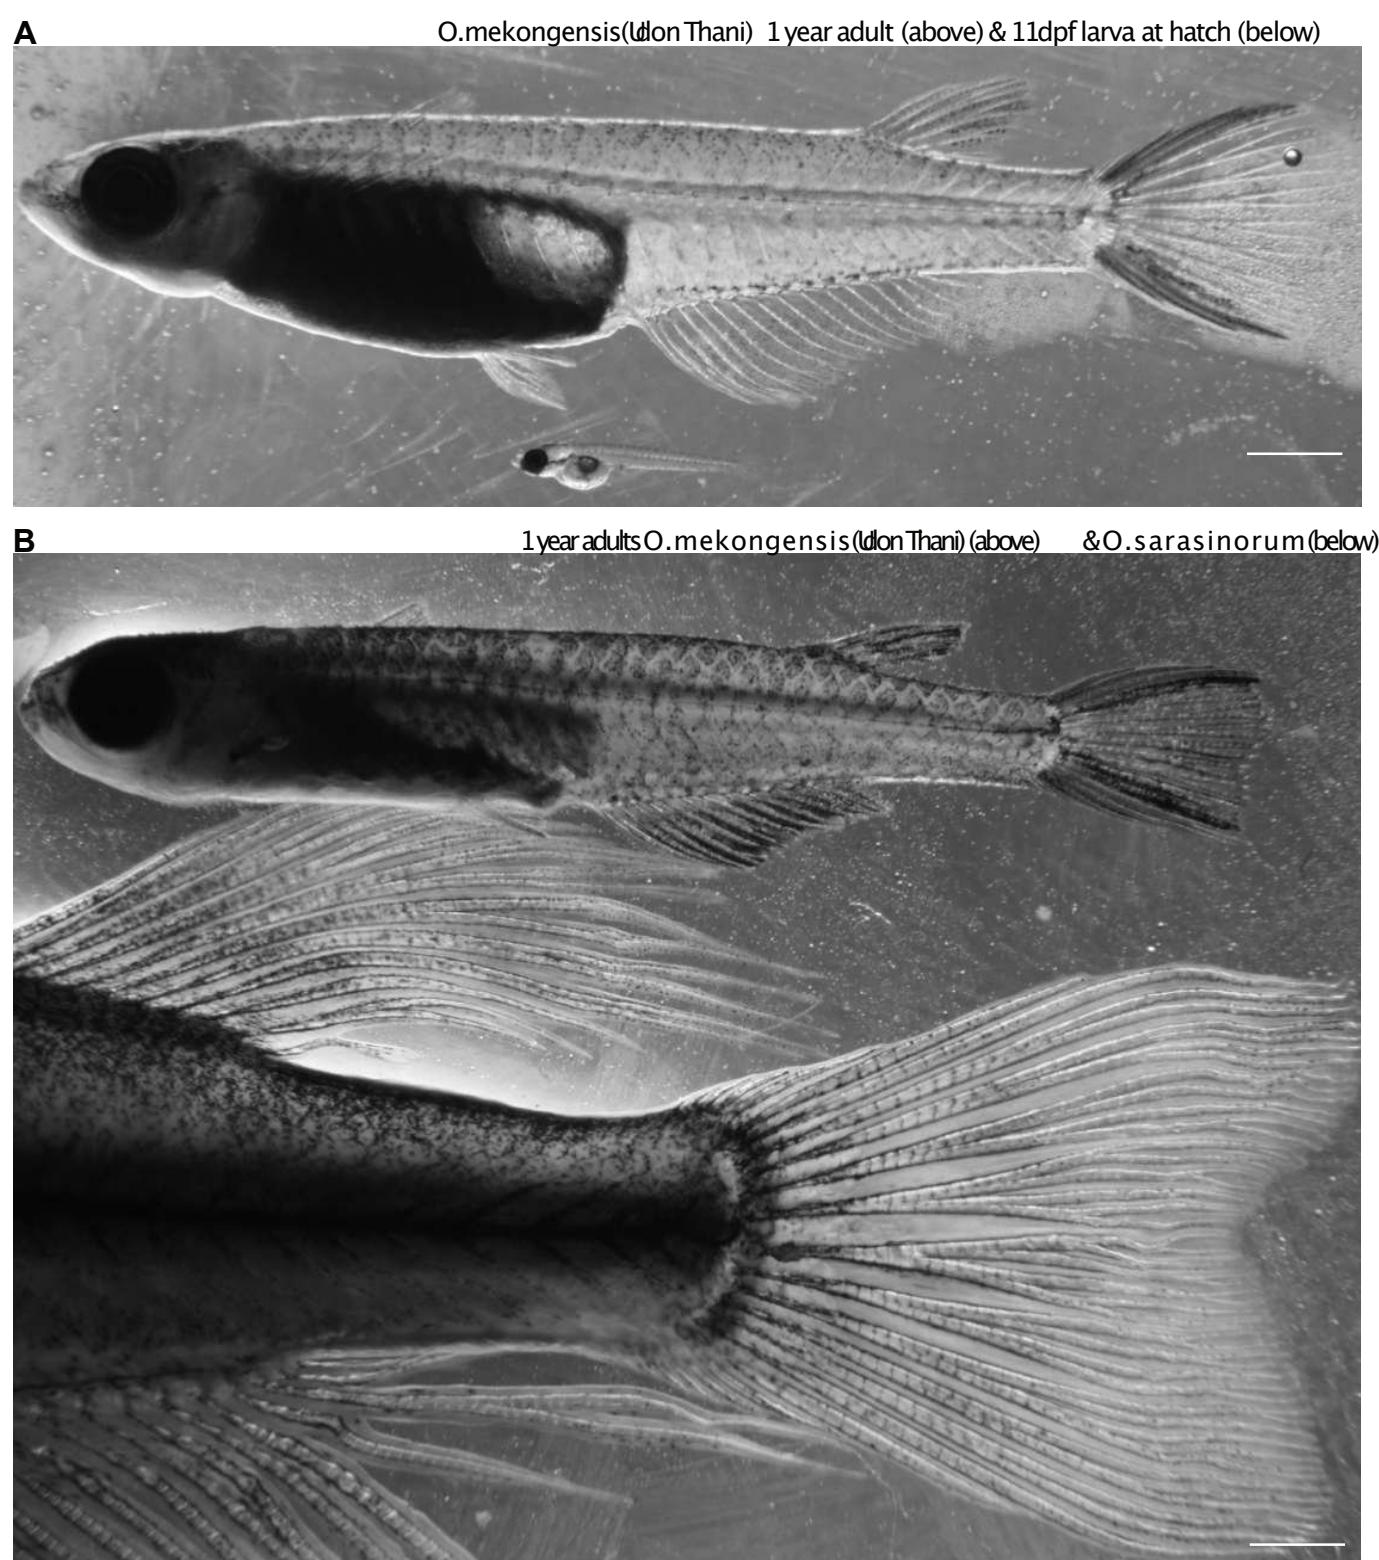

Fig. S2. Size differences between *Oryzias mekongensis* and *O.sarasinorum*

(A) Bright-field images showing differences in size between *O. mekongensis* (Udon Thani) one-year old adult (above) compared to an 11dpf larva (below). (B) Bright-field images showing differences in size between *O. mekongensis* (Udon Thani) one year old adult (above) and *O. sarasinorum* one year old adult (below). Scale bar in (A) and (B) = 1.6 mm. Anterior is to the left and dorsal is up in all panels.

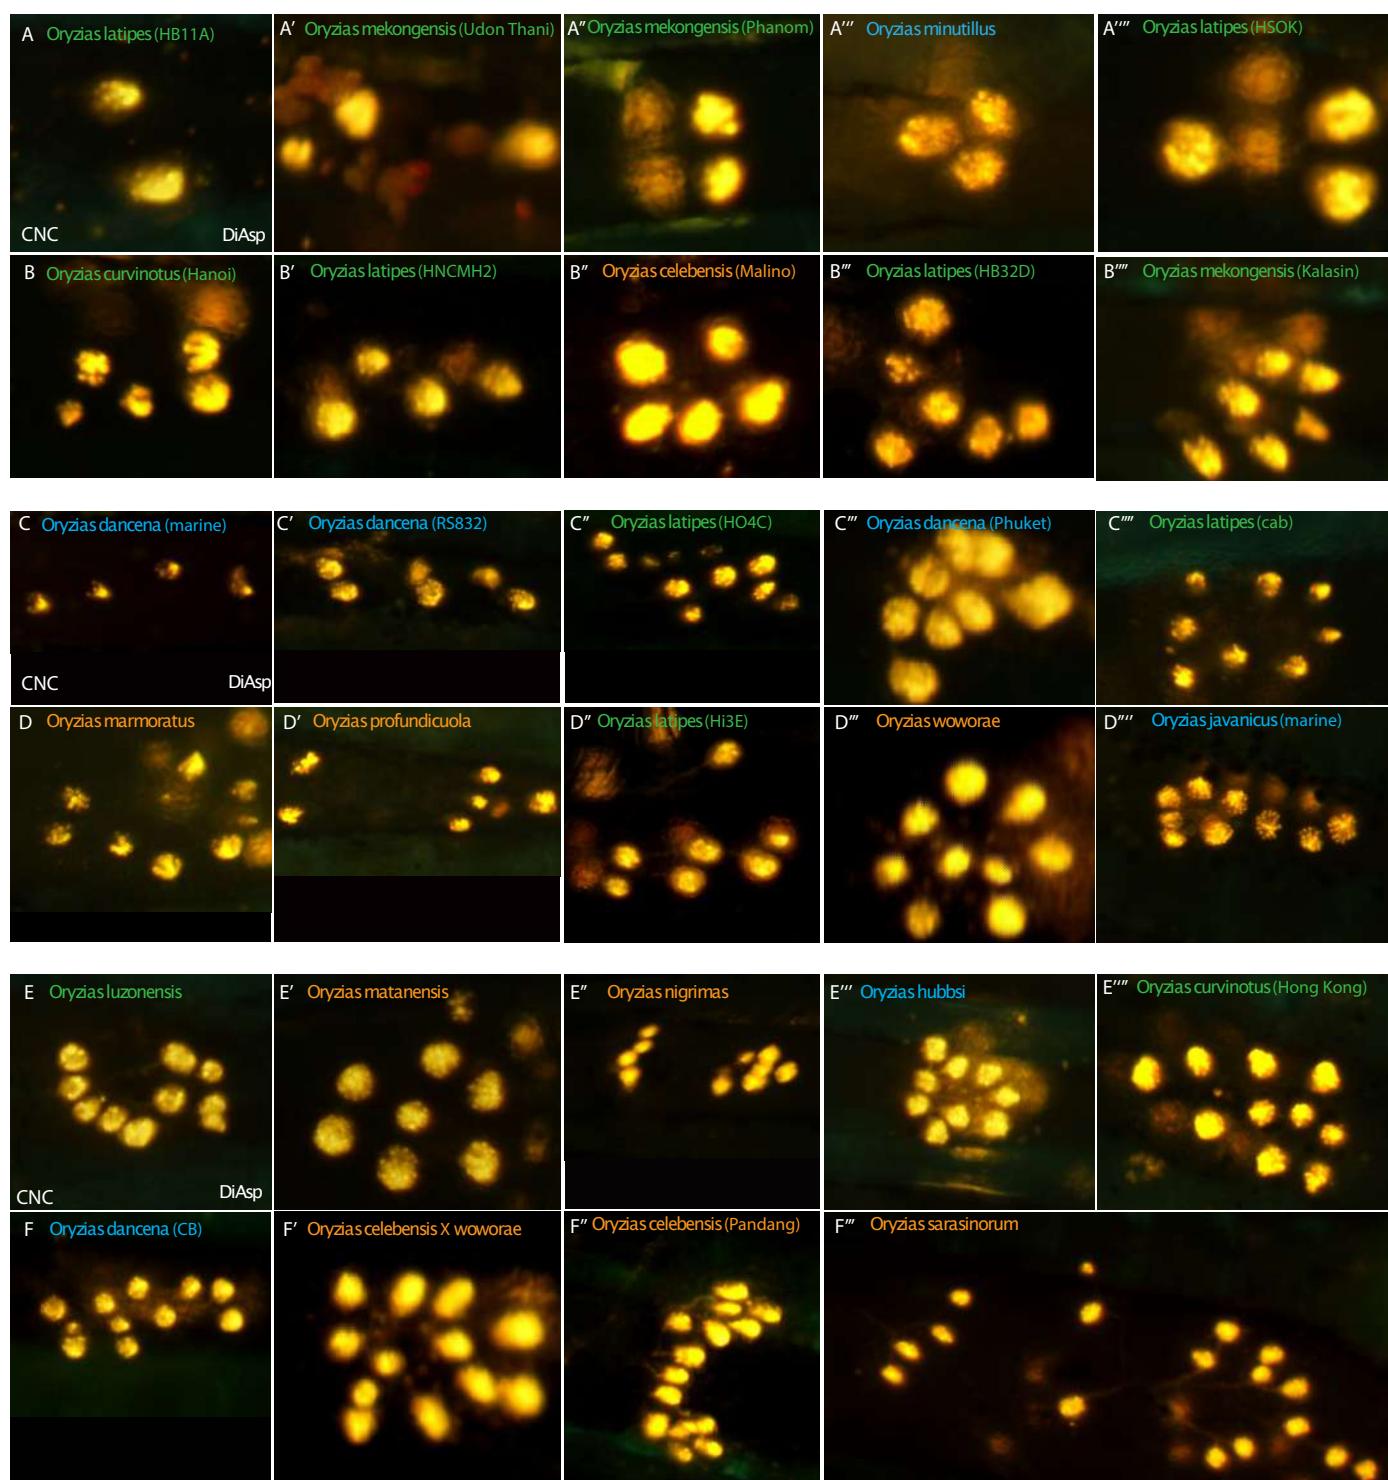

Fig. S3. Caudal neuromast cluster (CNC) organ numbers and distribution in the *Oryzias* group - extended

(A-F'') CNC organ numbers and patterns in 1 year old adult *Oryzias* group members obtained via fluorescent imaging of Diasp-2 treated fish. Images are arranged from the least elaborate to the most elaborate: (A) *O. latipes* (HB11A), (A') *O. mekongensis* (Udon Thani), (A'') *O. mekongensis* (Nakhon Phanom), (A'') *O. minutillus*, (A''') *O. latipes* (HSOK) sb, (B) *O. curvinotus* (Hanoi), (B') *O. latipes* (HNCMH2), (B'') *O. celebensis* (Malino), (B'') *O. latipes* (HB32D), (B''') *O. mekongensis* (Kalasin), (C) *O. dancena* (marine), (C') *O. dancena* (RS832), (C'') *O. latipes* (HO4C), (C''') *O. dancena* (Phuket), (C''') *O. latipes* (Cab), (D) *O. marmoratus*, (D') *O. profundicula*, (D'') *O. latipes* (Hi3E), (D''') *O. woworae*, (D''') *O. javanicus* (Penang), (E) *O. luzonensis*, (E') *O. matanensis*, (E'') *Oryzias nigrimas*, (E'') *Oryzias hubbsi*, (E''') *Oryzias curvinotus* (Hong Kong), (F) *Oryzias dancena* (Chidambaram), (F') F1 Hybrid *Oryzias woworae* X *celebensis* (Ujung Pandang), (F'') *O. celebensis* (Ujung Pandang), (F'') *O. sarasinorum*. Notice the differences in organ numbers and patterns between the different species and strains with *O. latipes* (HB11A), *O. mekongensis* and *O. minutillus* having the least elaborate CNCs while *O. sarasinorum* and *O. celebensis* (Ujung Pandang) having the most elaborate. Anterior is to the left and dorsal is up in all panels. Species names are colour coded according to sub-group (as in Figure 1); *O. latipes* complex in green, *O. celebensis* complex in orange and *O. javanicus* complex in blue.

Table S1. Accession numbers of *ND2* and *cyt b* sequences used in the mtDNA phylogeny.

Species	Locality / Collection site	Classification by molecular phylogeny	Accession number for mtDNA phylogeny <i>ND2</i>	Accession number for mtDNA phylogeny <i>cyt b</i>	Strain	NBRP strain ID	Comments
<i>Oryzias celebensis</i>	Malino River, Lake Tempe, South Sulawesi, Indonesia	<i>celebensis</i> species group	LC051717	LC051664	Malino	RS279	
					Ujung Pandang	RS278	
<i>Oryzias curvinotus</i>	So Lo Pun, Hong Kong. Bang La, Do Son and Dai Hop Vietnam	<i>latipes</i> species group	LC051739	LC051686	Hanoi	RS268
