

Fig. S1. Linear regressions between pupal mass and adult mass for (a) females developed at 18°C, (b) females developed at 25°C, (c) males developed at 18°C, (d) males developed at 25°C. Developmental temperatures are represented by symbol (circle: 18°C, triangle: 25°C) and sexes by colour (open: females, filled: males).

Table S1. Mean values and standard deviations (SDs) of each trait for males and females at the two developmental temperatures. Different superscript letters within rows show significant differences among treatments (Tukey HSD).
