THE JOURNAL OF PHYSIOLOGY

23 MAY 1958. VOL. 141, NO. 3

- OFFERIJNS, F. G. J., WESTERINK, D. and WILLEBRANDS, A. F. The relation of potassium deficiency to muscular paralysis by insulin.
- ABBOTT, B. C. and Lowy, J. Contraction in molluscan smooth muscle.
- ABBOTT, B. C. and Lowy, J. Mechanical properties of *Helix* and *Mytilus* muscle.
- SHEPHARD, R. J. 'Breath-holding' measurement of carbon monoxide diffusing capacity. Comparison of a field test with steady-state and other methods of measurement.
- BIGLAND, BRENDA and SAIMIS, ELEANOR. Factors influencing limb temperature during experiments on skeletal muscle.
- BIGLAND, BRENDA, GOETZEE, BERYL, MACLAGAN, JENNIFER and ZAIMIS, ELEANOR. The effect of lowered muscle temperature on the action of neuromuscular blocking drugs.
- CURTIS, D. R. and ECCLES, ROSAMOND M. The excitation of Renshaw cells by pharmacological agents applied electrophoretically.
- CURTIS, D. R. and ECCLES, ROSAMOND M. The effect of diffusional barriers upon the pharmacology of cells within the central nervous system.
- HOLMAN, MOLLIE E. Membrane potentials recorded with high-resistance micro-electrodes; and the effects of changes in ionic environment on the electrical and mechanical activity of the smooth muscle of the taenia coli of the guinea-pig.
- DOWNMAN, C. B. B. and HUSSAIN, A. Spinal tracts and supraspinal centres influencing visceromotor and allied reflexes in cats.
- PEISS, CLARENCE N. Cardiovascular responses to electrical stimulation of the brain stem.
- CASS, ROSEMARY, MARSHALL, P. B. and RILEY, J. F. 5-Hydroxytryptamine and histamine in mast cells of the mouse and rat.
- BURN, J. H. and DAY, MARGARET. The action of tubocurarine and acetylcholine on ciliary movement.
- ABRAHAMS, V. C. and PICKFORD, MARY. The effect of distension of the uterus on the composition of urine of conscious dogs.

OXFORD UNIVERSITY PRESS LONDON E.C.4

Journal of the Marine Biological Association of the United Kingdom

VOL. XXXVII, NO. 2, JUNE 1958, 46s. net

- C. EVE and A. J. SOUTHWARD. The breeding of *Arenicola scaudata* Johnston and *A. Branchialis* Aud. & Edw. at Plymouth.
- J. E. MORTON. Observations on the gymnosomatous pteropod *Chione timacina* (Phipps).
- DOUGLAS P. WILSON, D.Sc. Notes from the Plymouth aquarium. III.
- T. B. BAGENAL. The fecundity of Clyde plaice.
- R. H. HEDLEY. Tube formation by *Pomatoceros triqueter* (Polychaeta).
- M. R. DROOP. Requirement for thiamine among some marine and supra-littoral protists.
- DOUGLAS P. WILSON, D.Sc. and F. A. J. ARMSTRONG. Biological differences between sea waters: experiments in 1954 and 1955.
- V. BAINBRIDGE. Some observations on *Evadne nordmanni* Loven.
- F. A. J. ARMSTRONG. Phosphorus and silicon in sea water off Plymouth during 1956.
- J. S. ALEXANDROWICZ. Further observations on proprioceptors in Crustacea and a hypothesis about their function.
- JOANNA M. KAIN and G. E. FOGG. Studies on the growth of marine phytoplankton. I. *Asterionella japonica* Gran.
- P. R. WALNE. The importance of bacteria in laboratory experiments on rearing the larvae of *Orreca edulis* (L.).
- H. BARNES. The growth rate of *Verruca stroemia* (O. Müller).
- R. F. H. FREEMAN and J. LLEWELLYN. An adult digenetic trematode from an invertebrate host: *Proctoeces subtenius* (Linton) from the lamellibranch *Scrobicularia plana* (da Costa).
- S. M. MARSHALL, D.Sc. and A. P. ORR, D.Sc. On the biology of *Calanus finmarchicus*. X. Seasonal changes in oxygen consumption.
- G. R. FORSTER. Underwater observations on the fauna of shallow rocky areas in the neighbourhood of Plymouth.
- D. J. CRIEPP. The spread of *Elminius modestus* Darwin in North-West Europe.
- R. PHILLIPS DALES. Survival of anaerobic periods by two intertidal polychaeta, *Arenicola marina* L. and *Owenia fusiformis* Delle Chiaje.
- ABSTRACTS OF MEMOIRS.

All communications should be addressed to the Editors,

The Journal of Experimental Biology, Zoological Laboratory,
Downing Street, Cambridge, England.

MANUSCRIPTS:

Authors are requested to present their work in as *concise* a form as possible. MSS. should be *typewritten* (double spacing) on one side only of the paper, and the pages numbered. *Tables* and *Legends* should be on separate sheets from the rest of the MS. and should be numbered. The place where they are to be inserted in the text should be indicated in the margin of the MS. *Bibliography* should be given under the heading of 'References' and in the following form: Surname of authors (in alphabetical order), initials, date of publication, title of paper, title of journal (abbreviated according to the *World List of Scientific Periodicals*), volume and pages of reference (first and last). In the text a reference should be quoted by the author's name and date (in brackets), and not by the numerical order of the paper in the list of references. Every paper must contain a summary of the chief results of the enquiry.

ILLUSTRATIONS:

(i) *Line blocks*. These should be used whenever possible. Illustrations should be pen drawings in Indian ink (*jet black and waterproof*) on smooth white Bristol board, heavy drawing paper or good quality tracing paper. Drawings must not be folded or creased in any way. *Lettering should be temporarily and lightly put in by the author in soft pencil*. Where considerable reduction is required it is essential that the drawing be of such a character as to bear such reduction. *All brush work, tinting or pencil shading is to be avoided*.

Charts and curves can often be drawn to best advantage on *graph paper ruled in pale blue*. The blue lines, while ensuring accuracy, are easily eliminated by the printer, only the blackened lines that are desired remaining.

(ii) *Text half-tone blocks*. These are suitable for illustrations involving brushwork, or in which the depth of shading is an essential feature. They can be used for such things as oscillograph records and some photographs can be produced in this way, a good glossy bromide print being required. Illustrations should be gummed on *white card*, grouped and numbered as they are to appear in print. All lettering should be shown in position on a covering sheet of transparent paper.

(iii) *Plates*. Plates should be used only for illustrations, such as photomicrographs, in which the most accurate reproduction of fine detail is called for. Plates are expensive and the Editors may require an author to defray the cost of plates which in their opinion are not essential. The photographs making up the plate should be gummed on *white card*, grouped and numbered as they are to appear in print. Exclusive of margin the plate figures should not cover, when reduced, an area greater than $7\frac{1}{2}$ in. in length \times 5 in. in width when ready for reproduction as a single plate, or $7\frac{1}{2}$ in. \times $11\frac{1}{2}$ in. in the case of double plates. All lettering should be shown in position on a covering sheet of transparent paper.

Authors are asked not to submit sheets of illustrations which are more than foolscap size; or, if this cannot be avoided, to include photographic reductions for the convenience of referees.

ABSTRACTS:

Authors should submit with their MSS. *four copies* (typewritten, double spacing) of an abstract suitable for biological abstracting journals. The abstract will not appear in the *Journal of Experimental Biology* but will be scrutinised by the Editors before being passed for publication. The summary of a paper may serve as an abstract provided that it conforms to the following requirements. The abstract should outline as briefly as possible the results and the definitive conclusions of the work. Details of methods are generally not required. A paper of average length should be abstracted in about 100 words and the abstract should never exceed 3% of the original. An address (to which applications for offprints may be sent) should be added.

PROOFSHEETS AND OFFPRINTS:

Authors will receive one set of slip proofs for correction and return to the Editors. A page proof will also be sent if the slip proof is marked by the author 'Revise'. An allowance of ten shillings per sheet of sixteen pages will be made for alterations apart from printer's errors. Authors may be charged for any excess over this average. Authors will receive 50 copies of their papers free; additional copies may be purchased and should be ordered when the proofs are returned to the Editors.

THE SOCIETY FOR EXPERIMENTAL BIOLOGY

The Society holds Conferences four times a year at which the results of experimental investigations are presented and discussed. Enquiries about membership of the Society should be addressed to one of the Secretaries:

Dr J. D. CARTH, Department of Zoology, Queen Mary College, London, E. 1

Dr G. E. FOGG, Botany Department, University College,
Gower Street, London, W.C. 1
