

PALMER

top name for physiology and pharmacology apparatus

Known and used in physiology and pharmacology laboratories all over the world, C. F. Palmer equipment has a long-standing reputation for quality, reliability and precision. New products are continually under development, and as a member of the Baird & Tatlock Group, C. F. Palmer have extensive research and development facilities at their disposal.

Palmer equipment is now available on improved deliveries. For a revised delivery schedule, or to order your new catalogue, write to the address below.

Palmer kymographs such as this are in service in laboratories all over the world, providing smoked paper records of muscle and tissue movement, or through a manometer, of blood pressure. A 6-gear motor gives paper speeds from 1mm to 10mm per second. A.C. time-clock and signal markers, and the Starling ventilation pump are fitted.

Continuous injector. This unit, which can be used with all sizes of record-type syringes, automatically controls injection rates. A range of motor speeds is available giving emptying rates of from 10 mins. to 320 mins. per inch.

Square-Wave Stimulator. Provides a square-wave output of independently variable pulse rate (1/20 - 100 p.p.s.), pulse width (10 microsec. to 100 millisecc.) and intensity. Pulse rate is controllable either in steps or continuously.

C. F. Palmer (London) Ltd., Myographic Works, Effra Rd., Brixton, London, S.W.2

ORIGINS OF MODERN BIOLOGY

URL LANHAM

This account of the development of the main lines of biology takes the story up to the beginning of the twentieth century, when science began to take on its present role as a large-scale professional activity. The overall trend in the huge establishment of modern science is toward anonymity. This book is concerned with the individualistic phase of biology; the dedicated individuals of past centuries, who advanced science by giant steps, are colorfully presented. \$7.50
