

Fig. S1

Comparison of the aggression bioassay arenas (A) and a schematic of the volatilization bioassay (B).

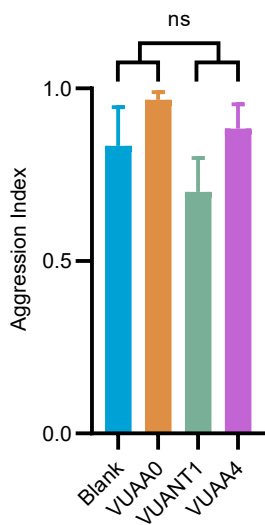

Fig. S2

Aggression (biting and wide opening of the mandibles) of individual ants in response to a mechanical stimulus from a Von Frey filament. There is no significant difference in aggression between ants exposed to either heated-air alone (Blank), VUAA0, VUANT1, or VUAA4 (Kruskal-Wallis test, Biological Replicates: Blank=11, VUAA0=10, VUANT1=10, VUAA4=10). Bars display mean. Error bars display S.E.M.

Table S1. Summary of statistical test results.
